Functional expression of mRNAs coding for tetanus and botulinum light chains in Aplysia central neurons p. 192

New perspectives to interrupt the parasitic cycle of trematodes, based upon the mechanisms parasites use to interfere with neuro-endocrine regulation in their snail host p. 199

MSH can deactivate both TNF stimulated and spontaneously active immunocytes p. 206

Effects of the molluscicide, metaldehyde, on neuronal activity of Lymnaea stagnalis p. 209

Effect of Cu$^{2+}$ and Pb$^{2+}$ on membrane excitability of snail neurons p. 214

The buccal ganglia of Helix pomatia in experimental epileptology p. 221

Neurons of the snail Lymnaea stagnalis as a model to study the neurotoxic side-effects of cytostatic compounds and the protective properties of Org.2766, an ACTH-analogue p. 227

Use of transmitter precursors in gastropod neuroethology p. 236

Does serotonin play a general modulatory role in the nervous system of Helix? An immunocytochemical approach p. 243

APGWamide: Molecular, histological and physiological examination of a novel neuropeptide involved with reproduction in the snail, Lymnaea stagnalis p. 248

The VD$_1$/RPD$_2$ neuronal system in the CNS of Lymnaea stagnalis and homologous systems in other molluscs with particular reference to the innervation of the auricle of the heart p. 255

Structure and action of novel neuropeptides isolated from a pulmonate, the African giant snail p. 260

New forms of buccalin and myomodulin: structure, localization and action p. 265

Structure and pharmacological characterization of a molluscan neuropeptide related to the crustacean RPCH p. 274

Identification of egg-laying hormone producing systems in gastropod molluscs p. 280

Prohormone structure and processing in Aplysia p. 286

Neuropeptide synthesis, processing, storage and release in the Caudodorsal cells and Light Green cells of Lymnaea stagnalis p. 292

The role of peptide diversity in the molluscan CNS p. 300

Alternative splicing generates multiple variant VD1/RPD2 transcripts in the Lymnaea CNS p. 309

The organization, expression and evolution of the insulin-related gene family in the mollusc Lymnaea stagnalis p. 316

Molecular characterization, biosynthesis and release of molluscan insulin-related peptides of Lymnaea stagnalis p. 322

Molluscan Conus venoms: A source of toxin probes for molluscan neurobiology p. 328

Neuroendocrine control of hydromineral regulation in the freshwater snail Lymnaea stagnalis p. 335

Purification and characterization of the neuropeptide schistosomes which inhibits the bioactivity of gonadotropic hormones in trematode-infected Lymnaea stagnalis p. 340

Use of the polymerase chain reaction in molluscan neurobiology p. 346

Molecular biological characterisation of ligand-gated ion channel/receptors in Lymnaea p. 353

Author index p. 359
