Preface
Acknowledgements
Opening of the Symposium
Medium and biocatalyst engineering

Physical-Chemical Aspects
Physical-chemical nature of low water systems for biocatalysis: especially phase behaviour, water activity and pH
Usefulness of NMR methods for assaying cutinase catalysed synthesis of ester in organic media
Membrane concentrations of primary alcohols which inhibit progesterone 11[alpha]-hydroxylase in Rhizopus nigricans
A comparison of enzymatic reactions in aqueous, organic and multiphase systems
Biocatalysis in non-conventional media: Effect of enzyme microenvironment

Biocatalyst Engineering
On the importance of the support material for enzymatic synthesis in organic media. Support effects at controlled water activity
Enzyme design for nonaqueous media
Application of Q.S.A.R. methodology to the biocatalysis. I. Hydrolysis of esters
Application of Q.S.A.R. methodology to the biocatalysis. II. Synthesis of peptides

Gaseous and (Near)-Supercritical Media
The role of water in gaseous biocatalysis
Pressure control of reactions in supercritical fluids: thermodynamics and kinetics

One-Liquid-Phase Systems
Enzyme mechanisms in homogeneous hydro-organic solutions. Solvents, temperature and pressure effects
Effect of reaction conditions on the activity and enantioselectivity of lipases in organic solvents
Correlations between enzyme activity, water activity, and Log P in one-liquid-phase systems
Microenvironmental effects on steroid 1-dehydrogenation in organic media using immobilized whole cells
Enzyme kinetics in monophasic and biphasic aqueous-organic systems

Two-Liquid-Phase Systems I
Process engineering of two-liquid phase biocatalysis
The effect of organic solvents on enzymatic esterification of polyols
Process development for the optical resolution of phenylalanine by means of chymotrypsin in a liquid-liquid-solid three-phase reaction system

Two-Liquid-Phase Systems II
Understanding protein performance in reversed micelles: the contribution of transport rate, local concentration and water content to enzyme kinetics
Protein-interface interactions in reverse micelles
Kinetics of enzyme-catalysed reactions in water-in-oil microemulsions

Concluding Remarks
Physical-Chemical Aspects

Enzyme kinetics in a self evolving microstructured medium p. 211
Enzyme deactivation phenomena in solid-state and organic solvents p. 213
Insolubilized enzyme derivatives in organic solvents: Mechanisms of inactivation and strategies for reactivation p. 221
Relation of enzymatic reaction rate and hydrophobicity of the solvent p. 229
Kinetic resolution of racemic glycidyl esters with porcine pancreatic lipase: a major effect of ping-pong kinetics p. 237
Biocatalysts operating at high substrate concentrations p. 245
Regulation of allosteric enzymes in water-restricted media p. 253
Quantitative deuterium NMR of protein hydration in air and organic solvents p. 261
Effects of temperature on stereochemistry of alcohol dehydrogenases from Thermoanaerobacter ethanolicus p. 267
Comparative influence of microenvironment on the activity of two enzymes: lipoygenase and thermolysin p. 275
On the crucial role of water in the lipase catalysed isomerisation of 1,2-(2,3)-diglyceride into 1,3-diglyceride p. 283
Rapid determination, using dielectric spectroscopy, of the toxicity of organic solvents to intact cells p. 291
Factors affecting protein transfer from an aqueous phase into a reversed micellar phase p. 299
Cryo-bioorganic synthesis - Enzyme catalysis at low and in low water content environments p. 307
Photoinduced charge separation in microemulsions p. 313
Induced stereo- and substrate selectivity of bio-imprinted [alpha]-chymotrypsin in anhydrous organic media p. 321

Biocatalyst Engineering

The effect of attachment of hydrophobic modifiers on the catalytic activities of lipase and trypsin p. 331
Influence of the solvent and the solid support on the microenvironment of immobilized [alpha]-chymotrypsin p. 339
Hydrophilic gels as immobilization materials and stabilizers for enzyme-catalysed esterifications in organic media p. 347
Effect of polyhydroxy compounds on the activity of lipase from Rhizopus arrhizus in organic solvent p. 355
Complex formation between chymotrypsin and polymers as a means to improve exposure of the enzyme to organic solvents p. 363
Synthesis of enkephalins using modified proteases in organic media p. 371
Stabilization of adsorbed enzymes used as biocatalysts in organic solvents p. 377

Gaseous and (Near-)Supercritical Media

The use of amylolytic and proteolytic enzymes in art restoration p. 385
Methyl isobutyl and methyl ethyl ketone biodegradation in biofilters p. 393
Lipase catalysed esterification in supercritical carbon dioxide p. 401
Effect of a near-critical and supercritical fluid on the viability ratio of microbial cells p. 407
Enzymatic reaction in organic solvents and supercritical gases p. 417
Fatty acid esterification in supercritical carbon dioxide p. 425

One-Liquid-Phase Systems
Influence of organic solvents on the specificity of [alpha]-chymotrypsin and subtilisin from B. subtilis strain 72 in acyl transfer reactions p. 435
Peptide synthesis in organic-aqueous media catalysed by [alpha]-chymotrypsin immobilised over different supports p. 443
Control of water activity by using salt hydrates in enzyme catalysed esterifications in organic media p. 451
Enzymatic peptide synthesis using new water-soluble amino acid derivatives p. 459
Lipase-catalyzed resolution of 1,2-diols p. 467
Partitioning of water during the production of terpene esters using immobilized lipase p. 475
Thermoinactivation of polyphenol oxidase in organic solvents with low water content p. 483
Continuous enzymatic transesterification of rapeseed oil and lauric acid in a solvent-free system p. 491
Effect of the solvent on enzyme enantioselectivity p. 497
Modification of waste fats by lipase-catalyzed reaction in solvent-free substrate blends p. 505
Thermolysin- and chymotrypsin-catalyzed peptide synthesis in the presence of salt hydrates p. 513
Lipase catalyzed triglyceride synthesis. The role of isomerisation p. 519
Resolution of 1-benzamido-4-carboxymethyl-cyclopent-2-ene using pig-liver esterase p. 525
[alpha]-Substituted primary alcohols as substrates for enantioselective lipase-catalyzed transesterification in organic solvents p. 533
Soluble and immobilized saccharidases in water-miscible organic solvents p. 541
Effect of water activity on rate of lipase-catalysed esterification p. 549
Synthesis of triacylglycerols. The crucial role of water activity control p. 557
Chemo-enzymatic synthesis of monosaccharide fatty acid esters and their preliminary characterization p. 563
Reversing an [alpha]-chymotrypsin catalyzed reaction, by substituting a water / 1,4-butanediol solvent mixture for the usual aqueous reaction medium p. 569
Engineering aspects of the lipase-catalyzed production of (R)-1-ferrocenylethylacetate in organic media p. 577
Variation of tyrosinase activity with solvent at a constant water activity p. 585
Hydrolase activity of Pseudomonas fluorescens lipase in organic media p. 593
Factors affecting lipase catalyzed n-butyl oleate synthesis p. 601
Behaviour of soluble aminoacylase in water-organic solvent mixtures p. 609

Two-Liquid-Phase Systems I
Effect of organic solvents on growth and anthraquinone production in Morinda citrifolia cell cultures p. 617
Functional stability of cytoplasmic enzymes in aqueous and mixed-phase solvents p. 623
Studies on papain catalyzed synthesis of Gly-Phe in a two-liquid-phase system p. 629
The effect of alkanes on viability, enzyme induction and enzyme activity in Flavobacterium dehydrogenans p. 637

Kinetics and engineering studies of lipase-catalyzed transesterification in organic solvent p. 645

Kinetic study of enzymatic reaction in aqueous-organic two-phase systems - An example of enhanced production of aldehydes by alcohol oxidase p. 653

The influence of organic cosolvents on the lipase catalyzed hydrolysis of decylchloroacetate p. 659

Biotransformation of benzaldehyde to benzyl alcohol by whole cells and cell extracts of baker's yeast in two-phase systems p. 667

Production of phenylacetyl carbinol by biotransformation using baker's yeast in two-phase systems p. 675

Two-Liquid-Phase Systems II

Stability and activity of cholesterol oxidase in supramolecular systems p. 683

Crown ethers can enhance enzyme activity in organic solvents p. 691

Dynamics, structure and stability of [alpha]-chymotrypsin in aqueous solution and in reverse micelles as studied by fluorescence spectroscopy p. 697

Comparison of activity and stability of enzymes suspended in organic solvents and dissolved in water-in-oil microemulsions p. 705

Batch and continuous lipolysis/product separation in a reversed micellar membrane bioreactor p. 713

Synthesis of fatty acid esters by a recombinant cutinase in reversed micelles p. 719

Application of fractional factorial design to the study of enzymatic dipeptide synthesis in reverse micelles p. 725

Studies on the specificity of Penicillium simplicissimum lipase catalyzed esterification reactions in microemulsions p. 733

Enzymes entrapped in liquid crystals - a novel approach for biocatalysis in non-aqueous media p. 739

Catalysis of polyphenol oxidase in a ternary system of reverse vesicles in organic solvents p. 755

Author Index p. 761

Table of Contents provided by Blackwell's Book Services and R.R. Bowker. Used with permission.
