Preface

Plenary Session

The State of the Art and Trends of CIM in Europe p. 3
On-Line Optimisation by Simulator for Flexible Manufacturing Systems p. 13
An Introduction to China National Computer Integrated Manufacturing Systems (CIMS) p. 27

Subject

Computer Integrated Manufacturing System

Production Planning and Operations Management in CIM Environments p. 35
The First Industrial Enterprise CIMS Implementation Program in China p. 45
Conception of an Integrated System of Maintenance and Decision-Making / Scheduling for Manufacturing Shop Control p. 53

CIM-OSA Framework and its RF/CAEE p. 63
A Distributed Computer System of Quality Testing p. 77
Endeavours to Standardize at the CAD/NC-Coupling p. 83

GPSS Simulation Study of Quality Inspection System p. 93
Architecture of MINI-MAP Application Layer and Optimum Service Selection from MMS p. 103

Modelling of Bearings Store Complete Line by Petri Net p. 111
The Application Level Services Protocol Requirements in the Heterogeneous Environment of CIM p. 117
The Application Study of Software Engineering in IPES p. 125

Flexible Manufacturing System / Robotics

Methods of Force Adaptation of Assembly Robots p. 137
Iterative Learning Control of Industrial Robots p. 145

A Robot Graphic Simulation System Implemented on Personal Computer p. 155
Performance Analysis of Assembly Robots Using Kinematics and Geometric Tolerances p. 163

Development of the Robot Simulation in FMS p. 173
Assembly Robot Program Synthesis p. 179

Modeling and Perturbation Analysis of FMS p. 187
The Defects in Material Flow of FMS and their Debugging p. 197
The Analysis for Operation Performance of FMS p. 205

Modelling of Robotic Cell by Petri Net p. 223
Overall Structure of Distributed Numerical Control System p. 231
The Development of ADNC Distributed Numerical Control System p. 239
Theories for Adaptive Control of Chucking Devices in NC-Turning Centers p. 249

Advanced Control System of Manufacturing Cell p. 257
An Approach to Hierarchical Planning and Scheduling for Flexible Manufacturing Cells p. 265

The Transport Models in FMS Simulation p. 273

Fuzzy Modelling and Fuzzy Rule-Based Control of FMS p. 281
Automated Laser Manufacturing Equipment Based on CNC-Operating Machines and Robots

A Simulating System for NC Lathe

Computer Aided Design / Computer Aided Manufacturing

Intelligent Design for Manufacturing Employing Knowledge Based Expert Systems

Product Data Exchange Specification and its Implementation

The Generation Display Algorithm and Intersection Algorithms of Triangular Bezier Surfaces

Desk Top Manufacturing Using Stereolitography (SLA) Techniques

CAD of Frame Structure for Machinery

An Approach to Integrate CAD/CAPP/CAM

The Introduction of a Practical Process Expert System

An Expert System on Numerical Control Automatic Programming

A Knowledge-Based Flexible Assembly Planner

Expert Knowledge Based System: Autoknowledge

Expert System of Understanding Assembly Drawing--Automatic Planning of Assembly Order

DiesFor. Low Cost CAD/CAM System for Hot Forging Dies

The Computer Distributed Control System for Machining and Measuring Precise Complicated Contour

A Computer-Controlled Tool Post Using a Piezoelectric Actuator for Turning Non-Rotationally Symmetric Surface

Model Creation on the Base of Object Visualization

Computer Aided Process Planning

Computer Aided Process Planning for the Flexible Automated Sheet Metal Bending

HUDACAPP-I: A System for Automatic Generation of Process Plans and NC Programmes within a Pseudo FMS

An Extended "Coverage Analysis" for Lot Sizing in Group Technology Cells Production Environment

Graphical Simulation in CAPP--An Animation Model

Computer-Aided Tool Management

User Oriented Tool Management System

STJLB-1 Expert System Generating a Part Classification and Coding System

Govern-for-Flexibility of Tool Stock and Delivery Operations for Factory Automation

Discussion about Design Model of CAPP

An Expert System for Cutting Tool Selection

ZESPP: A CAPP Expert System Based on Constructing Tool ZIP/E

Process Monitoring

Image Feature Extraction for Automatical Part Recognition

A New System Architecture for Multisensor Fusion

Use Adaptive Noise Cancelling and Pattern Recognition Techniques of AE Signal to Identify the Intense Wear of Cutting Tools

Automatic Visual Inspection: A Morphological Approach
Research on Maintenance Stratagem and Computer Aided Testing System for CNC Machines

Test and Information Processing of Cutting Tool Wear

Table of Contents provided by Blackwell's Book Services and R.R. Bowker. Used with permission.
