Preface
Acknowledgements

The behaviour of proteins at interfaces in relation to their structural stability p. 3

Influence of the solvent properties on protein stability in organic media p. 13

Interfacial damage to proteins during intensive mixing in fermentation and downstream processing p. 21

Thermal stability of enzymes: influence of solvation medium (a Raman spectroscopy study) p. 29

Protein stability in non-aqueous media: a DSC study p. 37

Stable enzymes by water removal p. 45

Enzyme stabilization by multipoint covalent attachment to activated pre-existing supports p. 55

Crosslinked enzyme crystals (CLECs) as immobilized enzyme particles p. 63

Stabilization of proteins by chemical methods p. 75

Structural determinants of the thermostability of thermolysin-like Bacillus neutral proteases p. 91

Molecular aspects of proteolysis of globular proteins p. 101

Stability of industrial enzymes p. 111

Stabilization of the detergent protease Savinase by proline substitution p. 133

Lessons from industry p. 145

Stabilization of enzymes by their specific antibodies p. 153

Immobilisation of [alpha]-chymotrypsin on soluble acrylic microgels; activity and stabilization p. 167

Improved stability of lignin peroxidase by immobilization p. 175

Ca\textsuperscript{2+}-induced enhancement of the molecular stability of Pseudomonas lipases p. 181

Denaturation of ribonucleases from different sources in the presence of denaturing or stabilizing agents p. 189

Conformational dynamics of native, compact and fully unfolded states of proteins detected by frequency domain fluorometry p. 197

Characteristics, protein engineering and applications of psychrophilic marine proteinases from Atlantic cod p. 205

Low temperature inactivation of a bacterial protease p. 215

Chemical deglycosylation of Horseradish peroxidase and surglycosylation using a new glycosylating reagent: effects on catalytic activity and stability p. 223

Engineering stability and specificity of the Lactococcus lactis SK11 proteinase p. 231

Comparative studies on the thermophilicity and stability of '5-methylthioadenosine phosphorylase from various sources p. 239

A process for stabilization of glycoproteins p. 247

Pressure-induced structural modifications of butyrylcholinesterase p. 255

Changing the thermostability of Bacillus licheniformis [alpha]-amylase p. 261

Stabilization of lipases for hydrolysis reactions on industrial scale p. 269
Cold denaturation of proteins as investigated by subzero transverse temperature gradient gel electrophoresis

Genetic algorithms as a new tool to study protein stability

Modeling three-dimensional structure and electrostatics of alkali-stable cyclomaltodextrin glucanotransferase

The effect of metal ion binding on protein stability

The number of cooperative regions (energetical domains) in a pepsin molecule depends on the pH of the medium

Stabilization of soluble proteins by intramolecular crosslinking with polyfunctional macromolecules. Poly-(glutaraldehyde-like) structure

Development of a method for the stabilization and formulation of xylanase from Trichoderma using experimental design

New technique for monitoring interfacial inactivation of enzymes by organic solvents

The stabilization of analytical enzymes using polyelectrolytes and sugar derivatives

Pressure effect on the stability of lipoxygenase: FTIR studies with the diamond anvil cell

Stability of Ca$^{2+}$-binding mutants of human lysozyme

Storage stability of enzymes in dry apolar solvent

Pressure sensitivity of enzymes and their modification

Comparative study of thermostability and structure of close homologs - barnase and binase

Immobilized Concanavalin A decreases the stability at proteolysis of amine oxidases

Stabilization of lipase from Candida rugosa by covalent immobilisation

Isolation, characterization and immobilization of penicillin acylase from Escherichia coli B-130

Thermodynamic properties of apocytochrome P450 [subscript cam]

Stabilization of yeast D-amino acid oxidase by matrix covalent attachment

Stability of an entrapped-cell system for the [actual symbol not reproducible] of steroids in organic medium

The kinetics of enzyme inactivation

Studies on stability of S-adenosylhomocysteine hydrolase from Sulfolobus solfataricus, a thermophilic archaeabacterium

Temperature, pH and media influence of lipase stability

Prediction of the unfolding heat capacity change of proteins

Inactivation of [alpha]-amylase from Bacillus amyloliquefaciens at low moisture contents

Kinetics of high-temperature inactivation of extracellular protease from Pseudomonas fluorescens 22F

Stability of a Fusarium solani pisi recombinant cutinase in reversed micelles

Influence of long chain alcohols and chemical modification on the microencapsulated [alpha]-chymotrypsin stability

Stability of A. oryzae [beta]-galactosidase in water miscible organic solvents

Fixation of the unfolding region - a hypothesis of enzyme stabilization
Probing conformational transitions in interface [alpha]1[beta]2 of human hemoglobin by site-directed mutagenesis  p. 505
Chemical modification of protein molecules improve their activity in organic solvents  p. 511
Author Index  p. 519

Table of Contents provided by Blackwell's Book Services and R.R. Bowker. Used with permission.
