Preface
Rene Leriche (1879-1955)

Teaching an educational program of medical angiology/vascular medicine in Europe p. 1
Low molecular weight heparins - their mode of action in plasma and its consequences for p. 9
the clinical laboratory
Other pharmacological action of low molecular weight heparin and monitoring in p. 17
clinical practice
Low molecular weight heparin in the prevention of perioperative thrombosis p. 27
Curative treatment of subcutaneous unfractionated and low molecular weight heparins p. 49
in established deep vein thrombosis
Tolerance of low molecular weight heparins p. 57
Heparins and prevention of deep vein thrombosis (DVT) p. 67
Anticoagulant treatment of deep vein thrombosis: the acute phase p. 71
Initial anticoagulant treatment of deep-vein thrombosis: heparin and low molecular p. 77
weight heparin
New antithrombotic agents for the prevention and the treatment of deep vein thrombosis p. 83

Heterogeneity of antiphospholipid antibodies: reactivity to p. 89
phosphatidylethanolamine
Antiphospholipid antibodies: vascular manifestations p. 95
Antiphospholipid syndrome and cardiac abnormalities p. 99
The treatment of antiphospholipid syndrome p. 105
Another look at Burger's disease p. 113
Takayasu's arteritis: an overview p. 117
Effect of native low density lipoprotein on monocyte adhesion to endothelial cells p. 125

Immunological factors in atherosclerosis p. 131
Elastin and elastases in the physiopathology of the arterial wall p. 137
Platelet adhesion and atherosclerosis p. 141
Inhibition of extracellular matrix proteinases by heparin: possible role in vascular p. 145
smooth muscle cell migration and proliferation
Regulation of vascular smooth muscle cell proliferation p. 149
Advantages of the CHAT classification of cerebrovascular disease p. 157
Status report on the North American symptomatic carotid surgery trial p. 161
Percutaneous angioplasty of carotid artery stenoses p. 173
The contribution of ultrasound techniques to the evaluation of the cerebral p. 179
circulation before and after revascularization
Screening of patients with posterior territory transitory symptoms p. 183
Assessment of the carotid and vertebral arteries in vertebrobasilar symptoms p. 189
Posterior territory cerebrovascular insufficiency. Criteria of priority and p. 193
contemporaneity in surgical treatment of multiple atherosclerotic carotid and vertebral artery
lesions
Vascular surgery for hemodynamic posterior circulation insufficiency p. 199
Natural history of patients with chronic occlusion of the internal carotid artery p. 209
Bilateral internal carotid artery occlusion (BCAO): long-term follow-up

Cerebral hemodynamics in patients with cerebrovascular disease

Effect of carotid endarterectomy on cerebral blood flow and cerebral blood volume measured by single photon emission tomography

Severe internal carotid stenosis associated with contralateral carotid occlusion: results of surgical treatment

Hemodynamic vertebrobasilar insufficiency following bilateral Blalock-Taussig surgery

New concepts of vascular dementia

Role of surgical treatment for nonhealing venous ulcers

The measurements of venous outflow obstruction, reflux and calf muscle pump ejection capacity in clinical practice

The coronary patient with multifocal atherosclerosis: epidemiologic data

The coronary patients with the multifocal atherosclerosis: clinical evaluation and investigation from auscultation to magnetic resonance imaging

Asymptomatic and symptomatic carotid and peripheral arterial disease in patients suffering from CHD: factors affecting the progression of atherosclerosis

Management of the vascular patient with coronary and cerebral atherosclerosis

Combined surgery for ischemic cardiac and cerebrovascular disease: early results and long-term follow-up

Induction and composition of intimal thickening and atherosclerosis

Intima-media thickness measurement - correlation between histology and high resolution ultrasound

Intima-media changes in a population study: KIHD

The value of the assessment of compliance and other dynamic measurements

Overview of drug therapy for cardiovascular prevention in patients with atherosclerotic peripheral vascular disease

The effect of glycosaminoglycans on the progression of arterial wall lesions

Hemorheology, red blood cell aggregation and microcirculation

Red blood cell aggregation and red blood cell populations

Rheo-optical measurement of RBC aggregation kinetics and its flow aspect

Acute phase reaction and RBC aggregation

Microvascular leukocyte kinetics in the low flow state

Interactions between margined granulocytes, platelets and venular endothelium in vivo

Molecular mechanisms of leukocyte rolling and adhesion

Pharmacological effects on white blood cells in the microcirculation

Hypertension: a vascular disease by excellence

Cardiovascular responses in sportsmen with genetic risk of hypertension: a plethysmographic and hemodynamic preliminary study

Iliac transluminal angioplasty: indications and results

Iliac endoprothesis: indication and results

Reversed saphenous vein bypass to the lower third part of the leg in critical limb ischemia

Distal artery dilatation in critical ischaemia of the lower limbs
Long-term patency of infrainguinal PTFE bypass
Thrombolysis in critical ischaemia of lower limbs
Revascularization of the arteries to the foot to salvage the severely ischemic limb
Ruptured abdominal aortic aneurysms: the Mayo Clinic experience
Factors affecting tissue fluid volume and initial lymphatic uptake
The initial lymphatic - a microvessel provided with special morphological, as well as, functional features
Representation of flow phenomena in terminal blood vessels and initial lymphatics using fluorescent microbeads
Psychology of female patients with lymphoedema
Methods of assessment of lymphatic function
Nodal relapse(s) and lymphedema(s)
Basic problems of the therapy of lymphedema
Dynamic pressure variation under bandages with different stiffness
Physical treatment of lymphoedema - what is the precise mission of each partner?
Microcirculation disorders and critical ischemia: introduction
Spontaneous activation of circulating monocytes and neutrophils and its pathophysiological consequences
Platelet adhesion molecules: target for new therapies
Changes in plasma properties and volume during ischaemia
Reperfusion injury
Fluorescence videomicroscopy and laser Doppler flux in patients with critical limb ischemia
TcPO\(_{2}\): theory and clinical applications
Transcutaneous PO\(_{2}\) in the achievement of stable wound closure and tissue salvage
Drug treatment for microcirculation disorders in critical limb ischemia
Spinal cord stimulation in critical ischaemia
Influence of an external pressure on skin microcirculation
Transcutaneous oxygen pressure measurement: usefulness and limitations
The skin as an organ of thermoregulation
Raynaud's phenomenon: history and definitions
Vasomotion during conditions of reduced tissue-perfusion
Clinical applications of duplex scanning
Magnetic resonance angiography
Rationale for and results of screening for abdominal aortic aneurysms in the vascular laboratory: who to screen and how to use the information?
Space environment: a problem for space medicine and a tool for research
Orthostatic intolerance post spaceflight: clinical and prophylactic aspects
The role of plasma volume in orthostatic hypotension
Adaptation of baroreflexes and orthostatic hypotension
Femoral flow assessment during LBNP for the evaluation of the vascular deconditioning induced by a long-term HDT
