

## Preface to the Series Physics and Evolution of the Earth's Interior

### Preface

A Synopsis of Selected Topics in Cosmology	p. 1
Introduction	p. 1
A synopsis of observations related to cosmology	p. 2
First cosmological models based on the general theory of relativity	p. 3
Standard cosmological models	p. 5
The Hubble law	p. 6
Friedman-Lemaitre equations	p. 9
The radiation-dominated epoch	p. 9
The matter-dominated epoch	p. 11
Planck units	p. 14
The singularity	p. 15
The flatness	p. 17
Elementary particles and fundamental interactions	p. 20
Symmetry properties and conservation laws	p. 24
Evolution scenario	p. 27
References	p. 31
Presolar Evolution	p. 34
Nuclear processes and primordial nucleosynthesis	p. 34
Star formation and evolution	p. 38
Stellar nucleosynthesis	p. 42
Galaxies: their formation and evolution	p. 48
References	p. 50
Rise of Planetary Bodies	p. 51
On the probability of the formation of planetary systems	p. 51
Condensation triggered by supernova explosion and tidal capture theory	p. 56
Foundations of accretion theory	p. 62
The structure and evolution of the protoplanetary disk	p. 72
Coagulation of orbiting bodies	p. 79
Collision phenomena related to planetology: accretion, fragmentation, cratering	p. 95
Dynamics of planetesimals	p. 119
Introduction	p. 119
Safronov's approach	p. 120
Elements of the kinetic theory of gases	p. 124
Nakagawa's approach	p. 132
Approaches considering inelastic collisions and gravitational encounters of planetesimals	p. 135
Hameen-Anttila approach	p. 148
Planetesimals with different masses	p. 157
Growth of the planetary embryo	p. 164
Basic equations	p. 164

Model of growth of planetary embryos	p. 166
Origin of the Moon and the satellites	p. 177
References	p. 181
Planets and Satellites	p. 188
Introduction	p. 188
Fundamental data	p. 189
Spherical symmetric planetary bodies: formulae and estimations	p. 207
Mass $M(r)$ and density [actual symbols not reproducible]( $r$ )	p. 210
Gravity acceleration $g(r)$	p. 211
Escape velocity [actual symbols not reproducible]	p. 212
Moment of inertia	p. 214
Pressure $p(r)$	p. 215
Gravitational energy [ $\omega$ ]( $r$ )	p. 221
Specific gravitational energy	p. 223
Temperature increase due to gravitational energy	p. 224
Spin energy [actual symbols not reproducible]	p. 228
Ratio of centrifugal to gravitational acceleration on the equator, $q$ , and related parameters	p. 229
Temperature of the visible planetary surface	p. 230
Evidence for the mantle-core structure of planets	p. 233
Two-zone models of planets: a general approach	p. 247
Two-zone parametrical model with a core of constant density	p. 257
Equations of state used for modelling of planetary interiors	p. 268
Models of internal structure	p. 284
The PREM Earth-model	p. 284
Terrestrial planets	p. 294
Jupiter and Saturn	p. 299
Uranus and Neptune	p. 308
Major icy satellites	p. 316
The medium-sized icy satellites; model of porous structure	p. 318
References	p. 329
Mineralogy and Petrology of the Terrestrial Planets	p. 335
Chemistry and mineralogy of the primitive planetary material	p. 335
Mineralogical thermobarometers	p. 341
Methods and purposes of geological thermometry and barometry	p. 341
Mineralogical exchange thermometry	p. 348
Nuclear cosmochronology	p. 352
Cosmochemical and mineralogical models of the planetary interiors	p. 353
Remarks on the methods of mineralogical-cosmochemical modelling of the interior of terrestrial planets	p. 353
Cosmochemical modelling of the global composition of the terrestrial planets	p. 357
Modelling of the Earth's interior	p. 365

Modelling of the Moon's interior	p. 375
Modelling of the interior of Venus	p. 384
Modelling of the interior of Mercury	p. 389
Modelling of the interior of Mars	p. 402
References	p. 408
Heat Sources in Evolution of the Earth and Terrestrial Planets	p. 414
Models of thermal evolution	p. 414
Heating in gravitational accumulation	p. 418
Soft-gravitational accumulation	p. 419
Accumulation by bombardment	p. 422
Heating in the gravitational self-compression	p. 424
Heating from deceleration of the Earth's rotation	p. 427
Heating from the Earth's core formation	p. 437
Radiogenic heat production	p. 453
Short-lived radioactive isotopes	p. 453
Long-lived radioactive isotopes	p. 454
References	p. 462
Cores of Terrestrial Planets	p. 466
Core formation and core-mantle separation	p. 466
Planetary magnetic fields	p. 483
Generation mechanism of the magnetic field of the terrestrial planets	p. 492
[alpha]-Effect mechanism	p. 495
Main properties of the planetary [alpha/omega]-dynamo model	p. 500
Final remarks	p. 509
Nearly-geostrophic thermal convection in the planetary cores	p. 513
Geostrophic balance	p. 518
Busse convection model	p. 520
Stevenson convection model	p. 529
Turbulent hydrodynamic convection	p. 534
Thermal convection in the rotating planetary cores in the presence of a weak magnetic field	p. 540
Nearly-geostrophic convection in the Busse model as a planetary magnetic field source	p. 540
Magnetic field amplitude generated by convection based on diffusion effects	p. 545
Influence of the magnetic field on convection with negligible thermal diffusivity and molecular viscosity	p. 550
References	p. 563
Index	p. 577
