

Scientific Thinking in Psychology

Why Take This Course?

Ways of Knowing

Authority

Use of Reason

Experience

The Ways of Knowing and Science

Science as a Way of Knowing

Science Assumes Determinism

Science Makes Systematic Observations

Science Produces Public Knowledge

Origins-A Taste of Introspection

Science Produces Data-Based Conclusions

Science Produces Tentative Conclusions

Science Asks Answerable Questions

Science Develops Theories that Can Be Disproven

Psychological Science and Pseudoscience

Recognizing Pseudoscience

Associates with True Science

Classic Studies-Disproving Phrenology

Relies on Anecdotal Evidence

Sidesteps Disproof

Reduces Complex Phenomena to Overly Simplistic Concepts

The Goals of Research in Psychology

Description

Prediction

Explanation

Application

A Passion for Research in Psychology

Eleanor Gibson (1910-2002)

B. F. Skinner (1904-1990)

Ethics in Psychological Research

Classic Studies-Infants at Risk

Developing the APA Code of Ethics

Ethical Guidelines for Research with Humans

Judging Benefits and Costs: The IRB

Informed Consent and Deception in Research

Ethics-Historical Problems with Informed Consent

Informed Consent and Special Populations

Treating Participants Well

Research Ethics and the Internet

Ethical Guidelines for Research with Animals
The Issue of Animal Rights
Origins-Antivivisection and the APA
Using Animals in Psychological Research
The APA Code for Animal Research
Justifying the Study
Caring for the Animals
Using Animals for Educational Purposes
Scientific Fraud
Data Falsification
Developing Ideas for Research in Psychology
Varieties of Psychological Research
Basic versus Applied Research
The Setting: Laboratory versus Field Research
Ethics-A Matter of Privacy
Quantitative versus Qualitative Research
Asking Empirical Questions
Operational Definitions
Developing Research from Observations of Behavior and Serendipity
Origins-Serendipity and Edge Detectors
Developing Research from Theory
The Nature of Theory
The Relationship between Theory and Data
Attributes of Good Theories
Falsification
Classic Studies -Falsification and Der Kluge Hans
Parsimony
Misunderstandings About Theories
Developing Research from Other Research
Research Teams and the "What's Next?" Question
Replication and Extension
Creative Thinking in Science
Reviewing the Literature
Computerized Database Searches
Search Tips
Measurement and Data Analysis
What to Measure-Varieties of Behavior
Developing Measures from Constructs
Origins-Reaction Time: From Mental Chronometry to Mental Rotation
Evaluating Measures
Reliability

Validity

Reliability and Validity

Scales of Measurement

Nominal Scales

Ordinal Scales

Interval Scales

Classic Studies-Measuring Somatotypes on an Interval Scale: Hoping for 4-4-4

Ratio Scales

Statistical Analysis

Descriptive and Inferential Statistics

Descriptive Statistics

Ethics-Lying with Statistics

Inferential Statistics

Hypothesis Testing

Type I and Type II Errors

Inferential Analysis

Interpreting Failures to Reject H

Going Beyond Hypothesis Testing

Effect Size

Confidence Intervals

Power

Introduction to Experimental Research

Essential Features of Experimental Research

Origins-John Stuart Mill and the Rules of Inductive Logic

Establishing Independent Variables

Varieties of Independent Variables

Control Groups

Controlling Extraneous Variables

Measuring Dependent Variables

Manipulated versus Subject Variables

Drawing Conclusions When Using Subject Variables

Classic Studies-Bobo Dolls and Aggression

The Validity of Experimental Research

Statistical Conclusion Validity

Construct Validity

External Validity

Other Populations

Ethics-Recruiting Participants: Everyone's in the Pool

Other Environments

Other Times

A Note of Caution

Internal Validity
Threats to Internal Validity
Studies Extending Over a Period of Time
History and Maturation
Regression
Testing and Instrumentation
Participant Problems
Subject Selection Effects
Attrition
Control Problems in Experimental Research
Between-Subjects Designs
The Problem of Creating Equivalent Groups
Random Assignment
Matching
Within-Subjects Designs
The Problem of Controlling Sequence Effects
Testing Once per Condition
Complete Counterbalancing
Partial Counterbalancing
Testing More Than Once per Condition
Reverse Counterbalancing
Block Randomization
Control Problems in Developmental Research
Classic Studies-The Record for Repeated Measures
Problems with Biasing
Experimenter Bias
Controlling for Experimenter Bias
Participant Bias
Origins-Productivity at Western Electric
Controlling for Participant Bias
Ethics-Research Participants Have Responsibilities Too
Experimental Design I: Single-Factor Designs
Single Factor-Two Levels
Between-Subjects, Single-Factor Designs
Within-Subjects, Single-Factor Designs
Classic Studies-Psychology's Most Widely Replicated Finding?
Analyzing Single-Factor, Two-Level Designs
Single Factor-More Than Two Levels
Between-Subjects, Multilevel Designs
Origins-Nonlinear Results: The Ebbinghaus Forgetting Curve
Within-Subjects, Multilevel Designs

Presenting the Data
Types of Graphs
Analyzing Single-Factor, Multilevel Designs
Control Group Designs
Placebo Control Groups
Waiting List Control Groups
Ethics-Who's in the Control Group?
Yoked Control Groups
Experimental Design II: Factorial Designs
Factorial Essentials
Identifying Factorial Designs
Outcomes-Main Effects and Interactions
Main Effects
Interactions
Interactions Sometimes Trump Main effects
Combinations of Main Effects and Interactions
Classic Studies-To Sleep, Perchance to Recall
Varieties of Factorial Designs
Mixed Factorial Designs
Factorials with Subject and Manipulated Variables: P x E Designs
Recruiting Participants for Factorial Designs
Ethics-On Being a Competent and Ethical researcher
Analyzing Factorial Designs
Origins-Factorials Down on the Farm
Correlational Research
Psychology's Two Disciplines
Origins-Galton's Studies of Genius
Correlation and Regression-The Basics
Positive and Negative Correlations
Scatterplots
Assuming Linearity
Restricting the Range
Coefficient of Determination-r
Regression Analysis-Making Predictions
Interpreting Correlations
Correlations and Causality
Directionality
Third Variables
Caution: Correlational Statistics versus Correlational Research
Using Correlations
The Need for Correlational Research

Varieties of Correlational Research
Ethics-APA Guidelines for Psychological Testing
Classic Studies-The Achieving Society
Multivariate Analysis
Multiple Regression
Factor Analysis
Quasi-Experimental Designs and Applied Research
Beyond the Laboratory
Applied Psychology in Historical Context
Origins-The Hollingworths, Applied Psychology, and Coca-Cola
Design Problems in Applied Research
Quasi-Experimental Designs
Nonequivalent Control Group Designs
Outcomes
Regression and Matching
Interrupted Time Series Designs
Outcomes
Variations on the Basic Time Series Design
Research Using Archival Data
Program Evaluation
Classic Studies-Reforms as Experiments
Planning for Programs-Needs Analysis
Monitoring Programs-Formative Evaluation
Evaluating Outcomes-Summative Evaluation
Weighing Costs-Cost-Effectiveness Analysis
A Note on Qualitative Analysis
Ethics-Evaluation Research and Ethics
Small N Designs
Research in Psychology Began with Small N
Origins-Cats in Puzzle Boxes
Reasons for Small N Designs
Misleading Results from Statistical Summaries of Grouped Data
Practical Problems with Large N Designs
The Experimental Analysis of Behavior
Operant Conditioning
Applied Behavior Analysis
Ethics-Controlling Human Behavior
Small N Designs in Applied Behavior Analysis
Elements of Single-Subject Designs
Withdrawal Designs
Multiple Baseline Designs

Changing Criterion Designs
Other Designs
Evaluating Single-Subject Designs
Case Study Designs
Classic Studies-The Mind of a Mnemonist
Evaluating Case Studies
Observational and Survey Research Methods
Observational Research
Varieties of Observational Research
Naturalistic Observation
Participant Observation
Classic Studies-When Prophecy Fails
Challenges Facing Observational Methods
Absence of Control
Observer Bias
Participant Reactivity
Ethics
Survey Research
Origins-Creating the "Questionnaire"
Probability Sampling
Random Sampling
Stratified Sampling
Cluster Sampling
Varieties of Survey Methods
Interviews
Phone Surveys
Electronic Surveys
Written Surveys
Creating an Effective Survey
Types of Survey Questions or Statements
Assessing Memory and Knowledge
Adding Demographic Information
A Key Problem: Survey Wording
Surveys and Ethics
Ethics-Using and Abusing Surveys
Epilogue
What I Learned in My Research Methods Course
A Passion for Research in Psychology
Elliot Aronson
Elizabeth Loftus
Communicating the Results of Research in Psychology

Research Reports, APA Style

General Guidelines

Writing Style

Reducing Bias in Language

Avoiding Plagiarism

Miscellaneous

Main Sections of the Lab Report
