Introduction: whither gene-environment interactions?

Gene-environment interaction: overcoming methodological challenges

Discussion

Gene-environment interaction and behavioural disorders: a developmental perspective based on endophenotypes

Discussion

Use of monozygotic twins to investigate the relationship between 5HTTLPR genotype, depression and stressful life events: an application of Item Response Theory

Discussion

Appendix

General discussion I

Role of gene-stress interactions in gene-finding studies

Discussion

Practice and public policy in the era of gene-environment interactions

Discussion

Gene-environment interaction and the metabolic syndrome

Discussion

General discussion II

Longitudinal studies of gene-environment interaction in common diseases-good value for money?

Discussion

Gene-environment interactions in breast cancer

Discussion

Unbiased forward genetics and systems biology approaches to understanding how gene-environment interactions work to predict susceptibility and outcomes of infections

Discussion

General discussion III

Gene-environment interaction in complex diseases: asthma as an illustrative case

Discussion

Conclusions: taking stock and looking ahead
