

Dedication	p. v
Preface	p. vii
The Basics of Set Theory	p. 1
Introduction	p. 1
Logical Connectives--Notation	p. 2
Introduction of Sets	p. 2
Specifications of Sets	p. 3
Examples of Sets	p. 4
Basic Sets of Numbers	p. 4
Paradoxes	p. 5
Axioms of Set Theory	p. 6
Sample Problems	p. 13
Summary of Chapter 1	p. 15
Problems	p. 15
Further Reading	p. 16
Relations and Mappings	p. 19
Relations--The Naive Approach	p. 19
Ordered n-tuple	p. 20
An n-tuple Versus a Set	p. 21
Cross-Product Set and Its Properties	p. 22
Sample Problem I	p. 25
n-ary Relation	p. 27
Binary Relations--Terminology	p. 29
Mappings--Classification	p. 30
Sample Problem II	p. 36
Summary of Chapter 2	p. 38
Problems	p. 39
Further Reading	p. 39
Mathematical Logic	p. 41
Logical Objects and Logical Statements	p. 41
Logical-Statement and Truth-Value Mappings	p. 42
Logical Connectives and Logical Formulas	p. 44
Adequate Set of Connectives	p. 44
Truth Values of Complex Logical Formulas	p. 45
Tautologies and Contradictions	p. 49
Sample Problems I	p. 50
Fundamental Tautologies. De Morgan Laws. Proof Formats	p. 52
Properties of Connectives. An Axiomatic Approach to Mathematical Logic	p. 57
Sample Problems II	p. 58
Boolean Algebra. The Analogy Between Mathematical Logic and Set Theory	p. 59
Sample Problems III	p. 61

Summary of Chapter 3	p. 63
Problems	p. 64
Further Reading	p. 65
Algebraic Structures: Group through Linear Space	p. 67
Classification of Algebraic Structures	p. 67
Algebra of Complex Numbers	p. 73
Geometric Representation of Complex Numbers	p. 75
Linear Space: Axioms and Examples	p. 77
Linear Combination and Span. Linear Mappings	p. 80
Linear Subspaces	p. 80
Linear Independence	p. 82
Basis and Dimension of a Linear Space	p. 82
Decomposition as Mapping. Isomorphism of Finite-Dimensional Linear Spaces	p. 85
Sample Problems	p. 86
Summary of Chapter 4	p. 90
Problems	p. 92
Further Reading	p. 92
Linear Mappings and Matrices	p. 95
Linear Mappings and Column Vectors	p. 95
Matrices	p. 95
The Matrix Product	p. 97
Matrix Algebra	p. 99
Transpose of a Matrix	p. 101
Fundamental Subspaces of Column Vectors Associated With a Given Matrix	p. 102
The Echelon Matrix. LU-decomposition	p. 103
The Fundamental Theorem of Linear Algebra	p. 106
Sample Problem I	p. 108
Eigenvalues, Eigenvectors, and the Characteristic Equation	p. 110
Matrix Diagonalization	p. 111
Functions of Matrices	p. 112
Sample Problem II	p. 117
Multiple Eigenvalues. The Jordan Form	p. 118
Summary of Chapter 5	p. 122
Problems	p. 123
Further Reading	p. 124
Metrics and Topological Properties	p. 127
Necessity of Distance Concept	p. 127
Metric Mapping and Distance: Definition and Axioms	p. 127
Metric Spaces	p. 129
Sample Problem	p. 132
Proximity. Limits in Metric Spaces	p. 133

Cauchy Sequences	p. 134
Open Ball: A Geometric Interpretation	p. 134
Examples of Cauchy Sequences	p. 135
Open and Closed Sets. Completeness vs. Closedness	p. 137
Continuous mapping	p. 140
Lipschitz (Bounded) Mapping	p. 141
Example of a Contraction Mapping	p. 141
Summary of Chapter 6	p. 142
Problems	p. 143
Further Reading	p. 144
Banach and Hilbert Spaces	p. 147
Introduction: The Great Alliance of Linearity and Metrics	p. 147
Norm Mapping. Banach Space	p. 147
Sample Problem I	p. 149
Finite-Dimensional Subspaces in Banach Space	p. 150
Inner-Product Mapping. Hilbert Space	p. 152
Sample Problems II	p. 154
The Cauchy-Schwarz Inequality	p. 155
Inner Product and Matrices. Hermitian Matrices	p. 157
Continuity of the Inner-Product Mapping	p. 159
Orthogonality	p. 160
Sample Problem III	p. 160
Eigenvectors of Hermitian Matrices	p. 162
The Projection Theorem	p. 163
Summary of Chapter 7	p. 167
Problems	p. 168
Further Reading	p. 169
Orthonormal Bases and Fourier Series	p. 171
Orthonormal Basis	p. 171
The Gram - Schmidt Orthonormalization	p. 172
Sample Problem I	p. 176
Sample Problem II	p. 178
Bessel's Inequality	p. 180
The Projection Decomposition	p. 181
Sample Problem III	p. 184
Complete Orthonormal Sequences	p. 186
The Fourier Series	p. 190
Properties of the Fourier Series	p. 191
Sample Problem IV	p. 192
Sample Problem V	p. 194
Summary of Chapter 8	p. 196

Problems	p. 197
Further Reading	p. 197
Operator Equations	p. 199
Inverse Mappings and Operator Equations	p. 199
Three Generic Problems and Their Equivalence	p. 200
Fixed-point Problem. The Contraction Mapping Theorem	p. 201
Successive Approximations	p. 204
Application to Differential Equations	p. 207
Sample Problem I	p. 212
Residual Principle and Residual Approximation	p. 215
Incompletely Specified Equations. Least-Square Approximation	p. 221
Problem of Uniqueness. Pseudo-Inverse Mapping	p. 226
Sample Problem II	p. 228
Summary of Chapter 9	p. 230
Problems	p. 231
Further Reading	p. 232
Fourier and Laplace Transforms	p. 235
Fourier Integral	p. 235
The Fourier Transform as a Mapping	p. 237
Digression. Properties of the δ -function	p. 239
Back to Fourier Transform Mapping	p. 241
Properties of the Fourier Transform	p. 241
Application to Linear Systems. The Convolution Product	p. 246
Sample Problem I: Smoothing Operator	p. 250
Residue Theory	p. 251
From Fourier Transform to Laplace Transform	p. 256
Properties of the Laplace Transform	p. 258
Basic Laplace Transforms	p. 262
The Laplace Transform Table	p. 264
Sample Problems II	p. 265
Laplace Transform of the Convolution Product	p. 267
Applications of the Laplace Transform to Solving Differential Equations	p. 268
Sample Problem III	p. 269
Summary of Chapter 10	p. 269
Problems	p. 270
Further Reading	p. 271
Partial Differential Equations	p. 273
A Short Introduction	p. 273
Definitions	p. 274
Canonical Forms	p. 274
The Parabolic Case	p. 280

Canonical Forms--A Summary	p. 281
Sample Problem I	p. 282
The Wave Equation. D'Alembert's Formula	p. 285
The Diffusion Equation. Transform Methods	p. 288
The Elliptic Case: Poisson's Equation	p. 292
A Very Brief Comment in Defense of the Laplace Transform	p. 299
Sample Problem II	p. 300
Summary of Chapter 11	p. 302
Problems	p. 303
Further Reading	p. 303
Topic Index	p. 306
