Microphysics of Gases
Thermodynamics
Equation of State of a Perfect Gas
First Law of Thermodynamics
Second Law of Thermodynamics
Thermal Properties of a Perfect Gas
Some Consequences of the Combined First and Second Laws
Kinetic Theory
The Distribution Function and Boltzmann's Equation
The Collision Integral
The Maxwellian Velocity Distribution
Boltzmann's H-Theorem
The Time of Relaxation
Classical Statistical Mechanics
Thermodynamic Probability and Entropy
Boltzmann Statistics
Ionization
Thermodynamic Properties of Ionizing Hydrogen
Dynamics of Ideal Fluids
Kinematics
Velocity and Acceleration
Particle Paths, Streamlines, and Streaklines
The Euler Expansion Formula
The Reynolds Transport Theorem
The Equation of Continuity
Vorticity and Circulation
The Cauchy-Stokes Decomposition Theorem
Equations of Motion and Energy
The Stress Tensor
The Momentum Equation
The Energy Equation
Dynamics of Viscous and Heat-Conducting Fluids
Equations of Motion and Energy: The Continuum View
The Stress Tensor for a Newtonian Fluid
The Navier-Stokes Equations
The Energy Equation
Similarity Parameters
Equations of Motion and Energy: The Kinetic Theory View
The Mean Free Path and Transport Phenomena
Moments of the Boltzmann Equation
Conservation Equations for Equilibrium Flow
The Chapman-Enskog Solution for Nonequilibrium Flow p. 107
Evaluation of the Transport Coefficients p. 117
Relativistic Fluid Flow p. 128
Basic Concepts of Special Relativity p. 128
The Relativity Principle p. 129
The Lorentz Transformation p. 130
Relativistic Kinematics of Point Particles p. 138
Relativistic Dynamics of Point Particles p. 140
Relativistic Dynamics of Ideal Fluids p. 144
Kinematics p. 144
The Equation of Continuity p. 145
The Material Stress-Energy Tensor p. 147
The Four-Force Density p. 149
The Dynamical Equations p. 150
The Kinetic Theory View p. 152
Relativistic Dynamics of Nonideal Fluids p. 160
Kinematics p. 160
The Stress-Energy Tensor p. 162
The Energy Equation p. 164
The Equations of Motion p. 166
Waves, Shocks, and Winds p. 169
Acoustic Waves p. 169
The Wave Equation p. 169
Propagation of Acoustic Waves p. 173
Wave Energy and Momentum p. 177
Damping of Acoustic Waves by Conduction and Viscosity p. 179
Acoustic-Gravity Waves p. 184
The Wave Equation and Wave Energy p. 184
Propagation of Acoustic-Gravity Waves in an Isothermal Medium p. 190
Propagation of Acoustic-Gravity Waves in a Stellar Atmosphere p. 201
Shock Waves p. 226
The Development of Shocks p. 227
Steady Shocks p. 230
Shock Structure p. 241
Propagation of Weak Shocks p. 259
Numerical Methods p. 266
Propagating Strong Shocks p. 288
Thermally Driven Winds p. 295
Basic Model p. 295
Physical Complications p. 301
Radiation and Radiative Transfer p. 309
The Radiation Field
The Specific Intensity and Photon Distribution Function
The Mean Intensity and Radiation Energy Density
The Radiative Energy Flux and Momentum Density
The Radiation Pressure Tensor
Thermal Radiation
Planck's Law
Stefan's Law
Thermodynamics of Equilibrium Radiation
Thermodynamics of Equilibrium Radiation Plus a Perfect Gas
Thermodynamics of Equilibrium Radiation Plus an Ionizing Gas
The Interaction of Radiation and Matter
Absorption, Emission, and Scattering
The Einstein Relations
The Einstein-Milne Relations
Opacity and Emission Coefficients
The Equation of Transfer
Derivation of the Transfer Equation
Optical Depth and Source Function
Moments of the Transfer Equation
Solution of the Transfer Equation
Formal Solution
The Diffusion Limit
The Wave Limit
The Grey Atmosphere, Mean Opacities, and Multigroup Methods
Numerical Methods
Statistical Equilibrium in the Presence of a Radiation Field
The Microscopic Implications of LTE
Non-LTE Rate Equations
Thermal Properties of a Nonequilibrium Gas
Solution of the Coupled Transfer and Statistical Equilibrium Equations in Static Media
The Two-Level Atom
The Complete Linearization Method
The Equations of Radiation Hydrodynamics
Lorentz Transformation of the Transfer Equation
The Photon Four-Momentum
Transformation Laws for the Specific Intensity, Opacity, and Emissivity
The Radiation Stress-Energy Tensor and Four-Force Vector
Covariant Form of the Transfer Equation
The Dynamical Equations for a Radiating Fluid
The Inertial-Frame Transfer Equation for a Moving Fluid
