Editors' introduction
List of contributors
Dynamic Structural Modeling
Efficient instrumental variables estimation of systems of implicit heterogeneous nonlinear dynamic equations with nonspherical errors
Envelope consistent functional separability
Flexible functional forms for profit functions and global curvature conditions
Likelihood inference in the nonlinear regression model with explosive linear dynamics
Exact inference in models with autoregressive conditional heteroscedasticity
Control of a linear regression process with unknown parameters
Some tests of nonparametric regression models
Linear Time Series Modeling
A central-limit result for instrumental variables estimators of linear time series models
Exact and approximate distribution of the t ratio test statistic in an AR(1) model
The use of ARIMA models in unobserved-components estimation: an application to Spanish monetary control
Chaotic Attractor Modeling
The aggregation-theoretic monetary aggregates are chaotic and have strange attractors: an econometric application of mathematical chaos
Theorems on distinguishing deterministic from random systems
Applications
Investment and sales: some empirical evidence
Me and my shadow: estimating the size of the U.S. hidden economy from time series data
Estimating structural models of unemployment and job duration
Comparison of dynamic factor demand models
