

Preface

The purpose of the book

Survey of contents

How to use the book

Notation, terminology and conventions

Acknowledgements

Introduction

Descriptive Methods

Introduction

Data display

Simple summary quantities

Modifications for axial data

Models

Introduction

Notation; trigonometric moments

Probability distributions on the circle

Analysis of a Single Sample of Data

Introduction

Exploratory analysis

Testing a sample of unit vectors for uniformity

Nonparametric methods for unimodal data

Statistical analysis of a random sample of unit vectors from a von Mises distribution

Statistical analysis of a random sample of unit vectors from a multimodal distribution

Other topics

Analysis of Two or More Samples, and of Other Experimental Layouts

Introduction

Exploratory analysis

Nonparametric methods for analysing two or more samples of unimodal data

Analysis of two or more samples from von Mises distributions

Analysis of data from more complicated experimental designs

Correlation and Regression

Introduction

Linear-circular association and circular-linear association

Circular-circular association

Regression models for a circular response variable

Analysis of Data with Temporal or Spatial Structure

Introduction

Analysis of temporal data

Spatial analysis

Some Modern Statistical Techniques for Testing and Estimation

Introduction

Bootstrap methods for confidence intervals and hypothesis tests: general description

Bootstrap methods for circular data: confidence regions for the mean direction

Bootstrap methods for circular data: hypothesis tests for mean directions

Randomisation, or permutation, tests

Tables

Data sets
