List of contributors

General Introduction

Chronic Models in Intact Animals - Concepts and Questions
The kindling model of epilepsy
Focal trigger zones and pathways of propagation in seizure generation
Genetic models of the epilepsies
Noradrenergic modulation of excitability: transplantation approaches to epilepsy research
Sensitivity of the immature central nervous system to epileptogenic stimuli
Features of the Epileptogenic Brain
Neurophysiological studies of alterations in seizure susceptibility during brain development
Electrophysiology and pharmacology of human neocortex and hippocampus in vitro
Cell death, plasticity and epilepsy: insights provided by experimental models of hippocampal sclerosis
Sprouting as an underlying cause of hyperexcitability in experimental models and in the human epileptic temporal lobe
Rapidly recurring seizures and status epilepticus: ictal density as a factor in epileptogenesis

'Normal' Brain Mechanisms That Support Epileptiform Activities
Brain slice models for the study of seizures and interictal spikes
Generation of epileptiform discharge by local circuits of neocortex
Study of GABAergic inhibition and GABAA receptors in experimental epilepsy
High potassium-induced synchronous bursts and electrographic seizures
Anti-epileptic effects of organic calcium channel blockers in animal experiments
Recent advances
