

Preface

Feasibility

Elicitation for games

Equilibrium, common knowledge, and optimal sequential decisions

Rational choice in the context of ideal games

Hyperrational games: concept and resolutions

Equilibria and the dynamics of rational deliberation

Tortuous labyrinth: noncooperative normal-form games between hyperrational players

On consistency properties of some strongly implementable social choice rules with endogenous agenda formation

Algorithmic knowledge and game theory

Possible worlds, counterfactuals, and epistemic operators

Semantical aspects of quantified modal logic

Epistemic logic and game theory

Abstract notions of simultaneous equilibrium and their uses

Representing facts

Introduction to metamoral

The logic of Ulam's games with lies

The acquisition of common knowledge

The electronic mail game: strategic behavior under 'almost common knowledge'

Knowledge-dependent games: backward induction

Common knowledge and games with perfect information

Game solutions and the normal form

The dynamics of belief systems: foundations versus coherence theories

Counterfactuals and a theory of equilibrium in games
