

Introduction

Basic concepts

Overview

A First Course

Classical phase transitions

The renormalization group

The quantum Ising model

The quantum rotor model

Correlations, susceptibilities, and the quantum critical point

Broken symmetries

Boson Hubbard model

Non-zero Temperatures

The Ising chain in a transverse field

Quantum rotor models: large-N limit

The  $d = 1$ ,  $O(N \times 3)$  rotor models

The  $d = 2$ ,  $O(N \times 3)$  rotor models

Physics close to and above the upper-critical dimension

Transport in  $d = 2$

Other Models

Dilute Fermi and Bose gases

Phase transitions of Dirac fermions

Fermi liquids, and their phase transitions

Heisenberg spins: ferromagnets and antiferromagnets

Spin chains: bosonization

Magnetic ordering transitions of disordered systems

Quantum spin glasses
