Introduction
Statistical methods for identifying hybrids and groups
How to use Migrate or why are Markov chain Monte Carlo programs difficult to use?

Nested clade phylogeographic analysis for conservation genetics
A comparison of methods for constructing evolutionary networks from intraspecific DNA sequences Patrick Mardulyn,
Challenges in assessing adaptive genetic diversity: overview of methods and empirical illustrations AurFlie Bonin and Louis Bernatchez
Monitoring and detecting translocations using genetic data Giorgio Bertorelle
Non-invasive genetic analysis in conservation
The role of ancient DNA in conservation biology Jon Beadell
Future-proofing genetic units for conservation: time's up for subspecies as the debate gets out of neutral!
Genetic diversity and fitness related traits in endangered salmonids
Genetics and conservation on islands: the Galapagos giant tortoise as a case study

Evolution of population genetic structure in marine mammal species
Recent developments in molecular tools for conservation
Theoretical outlook Mark Beaumont
