

Preface	p. ix
Acknowledgments	p. xi
Motivations and opportunities	p. 1
Earthquake hazards in southern California	p. 2
Radar lineaments on Venus	p. 9
Faulting in a North Sea hydrocarbon reservoir	p. 11
Anticracks in southern France	p. 16
Mountain building on the Colorado Plateau	p. 20
Concluding remarks	p. 24
Structural mapping techniques and tools	p. 25
Geographic coordinates and map projections	p. 27
Local coordinates and position vectors	p. 34
Orientations of structural elements	p. 52
Structural mapping using GPS technology	p. 69
Concluding remarks	p. 74
Characterizing structures using differential geometry	p. 75
The concept and description of lineations	p. 77
The concept and description of curved surfaces	p. 91
Applications of differential geometry to structural geology	p. 114
Concluding remarks	p. 119
Physical quantities, fields, dimensions, and scaling	p. 120
Physical quantities and the continuum	p. 121
Physical dimensions and dimensional analysis	p. 127
Dimensionless groups and the scaling of structural processes	p. 132
Scaled laboratory models	p. 143
Concluding remarks	p. 150
Deformation and flow	p. 152
Rock deformation: some observations and a simple description	p. 154
Evolving geometry of a structure: kinematic models, velocity models, and deformation	p. 158
Relation between deformation and velocity fields	p. 168
Velocity fields: the instantaneous state of motion	p. 177
General results	p. 183
Concluding remarks	p. 192
Force, traction, and stress	p. 194
Concepts of force and traction	p. 196
Concept and analysis of stress	p. 207
State of stress in the Earth	p. 227
Concluding remarks	p. 241
Conservation of mass and momentum	p. 243
Particle dynamics	p. 245
Rigid-body dynamics and statics	p. 248

Conservation of mass and momentum in a deformable continuum	p. 260
Field equations for the elastic solid and viscous fluid	p. 276
Concluding remarks	p. 285
Elastic deformation	p. 287
Estimating rock properties from geological field tests	p. 288
The idealized elastic material	p. 292
Quasi-static displacement boundary value problems	p. 299
Quasi-static traction boundary value problems	p. 308
Elastic properties from laboratory and engineering field tests	p. 319
Elastic heterogeneity and anisotropy	p. 323
Concluding remarks	p. 331
Brittle behavior	p. 333
Brittle deformation in the laboratory and in the field	p. 334
Strength of laboratory samples	p. 337
Brittle failure in a field of homogeneous stress	p. 357
Brittle failure in a field of heterogeneous stress	p. 364
Fracture propagation and fault growth	p. 371
Concluding remarks	p. 382
Viscous flow	p. 384
Rock deformation by viscous flow	p. 385
Constitutive relations for isotropic viscous fluids	p. 386
Plane and antiplane flow	p. 388
Viscous flow in layers: mullions and folds	p. 396
Flow of anisotropic viscous fluids	p. 416
Concluding remarks	p. 420
Rheological behavior	p. 421
Departures from linear viscous flow	p. 422
Boudinage and the non-linear power-law fluid	p. 423
Coupling of viscous flow and macroscopic diffusional transport	p. 440
Continuum properties of composite materials	p. 446
Anisotropic fluids and internal instability	p. 450
Concluding remarks	p. 455
Model development and methodology	p. 456
Idealization of field observations	p. 457
Selection of general boundary conditions	p. 462
A methodology for the practice of structural geology	p. 474
Concluding remarks	p. 477
References	p. 478
Index	p. 497
