

List of figures	p. x
Preface	p. xv
Understanding natural selection	p. 1
Natural selection	p. 2
Genetical approaches to natural selection	p. 7
Natural selection as an evolutionary game	p. 10
Road map	p. 21
Underlying mathematics and philosophy	p. 26
Scalars, vectors, and matrices	p. 28
Dynamical systems	p. 33
Biological population models	p. 39
Examples of population models	p. 42
Classical stability concepts	p. 49
The Darwinian game	p. 61
Classical games	p. 62
Evolutionary games	p. 72
Evolution by natural selection	p. 83
G-functions for the Darwinian game	p. 88
How to create a G-function	p. 89
Types of G-functions	p. 91
G-functions with scalar strategies	p. 92
G-functions with vector strategies	p. 93
G-functions with resources	p. 96
Multiple G-functions	p. 99
G-functions in terms of population frequency	p. 103
Multistage G-functions	p. 106
Non-equilibrium dynamics	p. 110
Darwinian dynamics	p. 112
Strategy dynamics and the adaptive landscape	p. 113
The source of new strategies: heritable variation and mutation	p. 116
Ecological time and evolutionary time	p. 119
G-functions with scalar strategies	p. 120
G-functions with vector strategies	p. 131
G-functions with resources	p. 140
Multiple G-functions	p. 141
G-functions in terms of population frequency	p. 143
Multistage G-functions	p. 144
Non-equilibrium Darwinian dynamics	p. 145
Stability conditions for Darwinian dynamics	p. 147
Variance dynamics	p. 149
Evolutionarily stable strategies	p. 151

Evolution of evolutionary stability	p. 153
G-functions with scalar strategies	p. 160
G-functions with vector strategies	p. 168
G-functions with resources	p. 170
Multiple G-functions	p. 174
G-functions in terms of population frequency	p. 180
Multistage G-functions	p. 183
Non-equilibrium Darwinian dynamics	p. 188
The ESS maximum principle	p. 197
Maximum principle for G-functions with scalar strategies	p. 198
Maximum principle for G-functions with vector strategies	p. 205
Maximum principle for G-functions with resources	p. 211
Maximum principle for multiple G-functions	p. 213
Maximum principle for G-functions in terms of population frequency	p. 219
Maximum principle for multistage G-functions	p. 222
Maximum principle for non-equilibrium dynamics	p. 225
Speciation and extinction	p. 231
Species concepts	p. 234
Strategy species concept	p. 236
Variance dynamics	p. 243
Mechanisms of speciation	p. 251
Predator-prey coevolution and community evolution	p. 264
Wright's shifting balance theory and frequency-dependent selection	p. 266
Microevolution and macroevolution	p. 268
Incumbent replacement	p. 272
Procession of life	p. 273
Matrix games	p. 275
A maximum principle for the matrix game	p. 277
The 2 x 2 bi-linear game	p. 284
Non-linear matrix games	p. 295
Evolutionary ecology	p. 304
Habitat selection	p. 304
Consumer-resource games	p. 309
Plant ecology	p. 324
Foraging games	p. 333
Managing evolving systems	p. 343
Evolutionary response to harvesting	p. 344
Resource management and conservation	p. 350
Chemotherapy-driven evolution	p. 359
References	p. 364
Index	p. 377
