

Introduction to Materials Science and Engineering  
What is Materials Science and Engineering?  
Classification of Materials  
Functional Classification of Materials  
Classification of Materials Based on Structure  
Environmental and Other Effects  
Materials Design and Selection Summary Glossary Problems  
Atomic Structure  
The Structure of Materials: Technological Relevance  
The Structure of the Atom  
The Electronic Structure of the Atom  
The Periodic Table  
Atomic Bonding  
Binding Energy and Interatomic Spacing  
Summary  
Glossary  
Problems  
Atomic and Ionic Arrangements  
Short-Range Order versus Long-Range Order  
Amorphous Materials  
Lattice, Unit Cells, Basis, and Crystal Structures  
Allotropic or Polymorphic Transformations  
Points, Directions, and Planes in the Unit Cell  
Interstitial Sites  
Crystal Structures of Ionic Materials  
Covalent Structures  
Diffraction Techniques for Crystal Structure Analysis  
Summary  
Glossary  
Problems  
Imperfections in the Atomic and Ionic Arrangements  
Point Defects  
Other Point Defects  
Dislocations  
Significance of Dislocations  
Schmid's Law  
Influence of Crystal Structure  
Surface Defects  
Importance of Defects  
Summary  
Glossary

Problems

Atom and Ion Movements in Materials

Applications of Diffusion

Stability of Atoms and Ions

Mechanisms for Diffusion

Activation Energy for Diffusion

Rate of Diffusion (Fick's First Law)

Factors Affecting Diffusion

Permeability of Polymers

Composition Profile (Fick's Second Law)

Diffusion and Materials Processing

Summary

Glossary

Problems

Mechanical Properties

Technological Significance

Terminology for Mechanical Properties

The Tensile Test: Use of the Stress-Strain Diagram

Properties Obtained from the Tensile Test

True Stress and True Strain

The Bend Test for Brittle Materials

Hardness of Materials

Strain Rate Effects and Impact Behavior

Properties Obtained from the Impact Test

Summary

Glossary

Problems

Mechanical Properties

Fracture Mechanics

The Importance of Fracture Mechanics

Microstructural Features of Fracture in Metallic Materials

Microstructural Features of Fracture in Ceramics, Glasses, and Composites

Weibull Statistics for Failure Strength Analysis

Fatigue

Results of the Fatigue Test

Application of Fatigue Testing

Creep, Stress Rupture, and Stress Corrosion

Evaluation of Creep Behavior

Use of Creep Data

Summary

Glossary

Problems

Strain Hardening and Annealing

Relationship of Cold Working to the Stress-Strain Curve

Strain-Hardening Mechanisms

Properties versus Percent Cold Work

Microstructure, Texture Strengthening, and Residual Stresses

Characteristics of Cold Working

The Three Stages of Annealing

Control of Annealing

Annealing and Materials Processing

Hot Working

Summary

Glossary

Problems

Principles of Solidification

Technological Significance

Nucleation

Applications of Controlled Nucleation

Growth Mechanisms

Solidification Time and Dendrite Size

Cooling Curves

Cast Structure

Solidification Defects

Casting Processes for Manufacturing Components

Continuous Casting and Ingot Casting

Directional Solidification [DS], Single Crystal Growth, and Epitaxial Growth

Solidification of Polymers and Inorganic Glasses

Joining of Metallic Materials

Summary

Glossary

Problems

Solid Solutions and Phase Equilibrium

Phases and the Phase Diagram

Solubility and Solid Solutions

Conditions for Unlimited Solid Solubility

Solid-Solution Strengthening

Isomorphous Phase Diagrams

Relationship Between Properties and the Phase D
