

Preface	
Introduction	p. 1
Methods for reconstructing evolutionary patterns	p. 1
Palaeontological data and evolutionary trees	p. 4
Species, taxa, and macroevolution	p. 5
Species in the fossil record	p. 7
Species concepts	p. 7
Species in palaeontology	p. 16
Are species different from other taxa?	p. 18
How phenons are recognized	p. 20
Examples in practice	p. 22
Parsimony, phylogenetic analysis, and fossils	p. 31
The cladistic revolution	p. 31
Characters in phylogenetic analyses	p. 33
Cladograms and their construction	p. 45
Fossils and phylogenetic reconstruction	p. 59
Higher taxa	p. 73
Why higher taxa are needed in evolutionary studies	p. 73
The construction of higher taxa	p. 74
Higher taxa and evolutionary patterns	p. 80
Classification and rank	p. 91
Macroevolution and emergent characters of higher taxa	p. 98
The nature of biostratigraphic data	p. 107
Biases affecting taxonomic ranges	p. 108
Estimating absolute taxonomic ranges	p. 117
Taxonomic ranges: do they provide a test of phylogenetic hypotheses?	p. 122
The construction of evolutionary trees	p. 125
Trees, cladograms, and ancestors	p. 125
How phylogenetic trees are constructed	p. 128
Examples of phylogenetic tree construction in practice	p. 141
Patterns from the fossil record	p. 154
Why phylogenetic data are essential	p. 154
Biodiversity	p. 158
Morphological disparity	p. 167
Origination patterns	p. 174
Extinction patterns	p. 177
Taxonomic duration	p. 180
Rates of evolution	p. 187
Fossils and biogeographic patterns	p. 193
References	p. 198
Index	p. 219
