

Frege (1879)

Begriffsschrift, a formula language, modeled upon that of arithmetic, for pure thought

Peano (1889)

The principles of arithmetic, presented by a new method

Dedekind (1890a)

Letter to Keferstein Burali-Forti (1897 and 1897a)

A question on transfinite numbers and On well-ordered classes

Cantor (1899)

Letter to Dedekind

Padoa (1900)

Logical introduction to any deductive theory

Russell (1902)

Letter to Frege

Frege (1902)

Letter to Russell

Hilbert (1904)

On the foundations of logic and arithmetic

Zermelo (1904)

Proof that every set can be well-ordered

Richard (1905)

The principles of mathematics and the problem of sets

Koehnig (1905a)

On the foundations of set theory and the continuum problem

Russell (1908a)

Mathematical logic as based on the theory of types

Zermelo (1908)

A new proof of the possibility of a well-ordering

Zermelo (1908a)

Investigations in the foundations of set theory I Whitehead and Russell (1910)

Incomplete symbols: Descriptions

Wiener (1914)

A simplification of the logic of relations

Louwenheim (1915)

On possibilities in the calculus of relatives

Skolem (1920)

Logico-combinatorial investigations in the satisfiability or provability of mathematical propositions: A simplified proof of a theorem by L

Louwenheim and generalizations of the theorem

Post (1921)

Introduction to a general theory of elementary propositions

Fraenkel (1922b)

The notion "definite" and the independence of the axiom of choice

Skolem (1922)

Some remarks on axiomatized set theory

Skolem (1923)

The foundations of elementary arithmetic established by means of the recursive mode of thought, without the use of apparent variables ranging over infinite domains

Brouwer (1923b, 1954, and 1954a)

On the significance of the principle of excluded middle in mathematics, especially in function theory, Addenda and corrigenda, and Further addenda and corrigenda von Neumann (1923)

On the introduction of transfinite numbers Schouml;nfinkel (1924)

On the building blocks of mathematical logic filbert (1925)

On the infinite von Neumann (1925)

An axiomatization of set theory Kolmogorov (1925)

On the principle of excluded middle Finsler (1926)

Formal proofs and undecidability Brouwer (1927)

On the domains of definition of functions filbert (1927)

The foundations of mathematics Weyl (1927)

Comments on Hilbert's second lecture on the foundations of mathematics Bernays (1927)

Appendix to Hilbert's lecture "The foundations of mathematics" Brouwer (1927a)

Intuitionistic reflections on formalism Ackermann (1928)

On filbert's construction of the real numbers Skolem (1928)

On mathematical logic Herbrand (1930)

Investigations in proof theory: The properties of true propositions Gouml;del (1930a)

The completeness of the axioms of the functional calculus of logic Gouml;del (1930b, 1931, and 1931a)

Some metamathematical results on completeness and consistency, On formally undecidable propositions of Principia mathematica and related systems I, and On completeness and consistencyHerbrand (1931b)

On the consistency of arithmetic
