

Introduction	p. 1
Berry Phase	p. 6
General Formalism	p. 6
Gauge-Independent Computation of the Berry Phase	p. 8
Degeneracies and Level Crossing	p. 10
Two-Level System Using the Berry Curvature	p. 10
Two-Level System Using the Hamiltonian Approach	p. 11
Spin in a Magnetic Field	p. 13
Can the Berry Phase Be Measured?	p. 14
Problems	p. 14
Hall Conductance and Chern Numbers	p. 15
Current Operators	p. 15
Current Operators from the Continuity Equation	p. 16
Current Operators from Peierls Substitution	p. 17
Linear Response to an Applied External Electric Field	p. 18
The Fluctuation Dissipation Theorem	p. 20
Finite-Temperature Green's Function	p. 22
Current-Current Correlation Function and Electrical Conductivity	p. 23
Computing the Hall Conductance	p. 24
Diagonalizing the Hamiltonian and the Flat-Band Basis	p. 25
Alternative Form of the Hall Response	p. 29
Chern Number as an Obstruction to Stokes' Theorem over the Whole BZ	p. 30
Problems	p. 32
Time-Reversal Symmetry	p. 33
Time Reversal for Spinless Particles	p. 33
Time Reversal in Crystals for Spinless Particles	p. 34
Vanishing of Hall Conductance for T-Invariant Spinless Fermions	p. 35
Time Reversal for Spinful Particles	p. 35
Kramers' Theorem	p. 36
Time-Reversal Symmetry in Crystals for Half-Integer Spin Particles	p. 37
Vanishing of Hall Conductance for T-Invariant Half-Integer Spin Particles	p. 39
Problems	p. 40
Magnetic Field on the Square Lattice	p. 41
Hamiltonian and Lattice Translations	p. 41
Diagonalization of the Hamiltonian of a 2-D Lattice in a Magnetic Field	p. 44
Dependence on k	p. 46
Dirac Fermions in the Magnetic Field on the Lattice	p. 47
Hall Conductance	p. 49
Diophantine Equation and Streda Formula Method	p. 49
Explicit Calculation of the Hall Conductance	p. 51
Problems	p. 59

Hall Conductance and Edge Modes: The Bulk-Edge Correspondence	p. 60
Laughlin's Gauge Argument	p. 60
The Transfer Matrix Method	p. 62
Edge Modes	p. 65
Bulk Bands	p. 65
Problems	p. 69
Graphene	p. 70
Hexagonal Lattices	p. 70
Dirac Fermions	p. 72
Symmetries of a Graphene Sheet	p. 72
Time Reversal	p. 73
Inversion Symmetry	p. 73
Local Stability of Dirac Points with Inversion and Time Reversal	p. 74
Global Stability of Dirac Points	p. 76
C	p. 76
Breaking of C	p. 79
Edge Modes of the Graphene Layer	p. 80
Chains with Even Number of Sites	p. 82
Chains with Odd Number of Sites	p. 85
Influence of Different Mass Terms on the Graphene Edge Modes	p. 89
Problems	p. 90
Simple Models for the Chern Insulator	p. 91
Dirac Fermions and the Breaking of Time-Reversal Symmetry	p. 91
When the Matrices ζ Correspond to Real Spin	p. 91
When the Matrices ζ Correspond to Isospin	p. 92
Explicit Berry Potential of a Two-Level System	p. 92
Berry Phase of a Continuum Dirac Hamiltonian	p. 92
The Berry Phase for a Generic Dirac Hamiltonian in Two Dimensions	p. 93
Hall Conductivity of a Dirac Fermion in the Continuum	p. 94
Skyrmion Number and the Lattice Chern Insulator	p. 95
$M > 0$ Phase and $M < -4$ Phase	p. 96
The $-2 < M < 0$ Phase	p. 96
The $-4 < M < -2$ Phase	p. 98
Back to the Trivial State for $M < -4$	p. 98
Determinant Formula for the Hall Conductance of a Generic Dirac Hamiltonian	p. 99
Behavior of the Vector Potential on the Lattice	p. 99
The Problem of Choosing a Consistent Gauge in the Chern Insulator	p. 100
Chern Insulator in a Magnetic Field	p. 102
Edge Modes and the Dirac Equation	p. 103
Haldane's Graphene Model	p. 104
Symmetry Properties of the Haldane Hamiltonian	p. 106

Phase Diagram of the Haldane Hamiltonian	p. 106
Problems	p. 107
Time-Reversal-Invariant Topological Insulators	p. 109
The Kane and Mele Model: Continuum Version	p. 109
Adding Spin	p. 110
Spin $\frac{1}{2}$; and Spin $\frac{3}{2}$;	p. 112
Rashba Term	p. 112
The Kane and Mele Model: Lattice Version	p. 113
First Topological Insulator: Mercury Telluride Quantum Wells	p. 117
Inverted Quantum Wells	p. 117
Experimental Detection of the Quantum Spin Hall State	p. 120
Problems	p. 121
Z	p. 123
Z	p. 123
Pfaffian in the Even Subspace	p. 124
The Odd Subspace	p. 125
Example of an Odd Subspace: d	p. 125
Zeros of the Pfaffian	p. 126
Explicit Example for the Kane and Mele Model	p. 127
Theory of Charge Polarization in One Dimension	p. 128
Time-Reversal Polarization	p. 130
Non-Abelian Berry Potentials at $k, -k$	p. 133
Proof of the Unitarity of the Sewing Matrix B	p. 134
A New Pfaffian Z	p. 134
Z	p. 138
Z	p. 141
Equivalence between Topological Insulator Descriptions	p. 144
Problems	p. 145
Crossings in Different Dimensions	p. 147
Inversion-Asymmetric Systems	p. 148
Two Dimensions	p. 149
Three Dimensions	p. 149
Inversion-Symmetric Systems	p. 151
\hat{z}	p. 151
\hat{z}	p. 152
Mercury Telluride Hamiltonian	p. 154
Problems	p. 156
Time-Reversal Topological Insulators with Inversion Symmetry	p. 158
Both Inversion and Time-Reversal Invariance	p. 159
Role of Spin-Orbit Coupling	p. 162
Problems	p. 163

Quantum Hall Effect and Chern Insulators in Higher Dimensions	p. 164
Chern Insulator in Four Dimensions	p. 164
Proof That the Second Chern Number Is Topological	p. 166
Evaluation of the Second Chern Number: From a Green's Function Expression to the Non-Abelian Berry Curvature	p. 167
Physical Consequences of the Transport Law of the 4-D Chern Insulator	p. 169
Simple Example of Time-Reversal-Invariant Topological Insulators with Time-Reversal and Inversion Symmetry Based on Lattice Dirac Models	p. 172
Problems	p. 175
Dimensional Reduction of 4-D Chern Insulators to 3-D Time-Reversal Insulators	p. 177
Low-Energy Effective Action of (3 + 1)-D Insulators and the Magnetoelectric Polarization	p. 177
Magnetoelectric Polarization for a 3-D Insulator with Time-Reversal Symmetry	p. 181
Magnetoelectric Polarization for a 3-D Insulator with Inversion Symmetry	p. 182
3-D Hamiltonians with Time-Reversal Symmetry and/or Inversion Symmetry as Dimensional Reductions of 4-D Time-Reversal-Invariant Chern Insulators	p. 184
Problems	p. 185
Experimental Consequences of the Z	p. 186
Quantum Hall Effect on the Surface of a Topological Insulator	p. 186
Physical Properties of Time-Reversal Z	p. 187
Half-Quantized Hall Conductance at the Surface of Topological Insulators with Ferromagnetic Hard Boundary	p. 188
Experimental Setup for Indirect Measurement of the Half-Quantized Hall Conductance on the Surface of a Topological Insulator	p. 189
Topological Magnetoelectric Effect	p. 189
Problems	p. 191
Topological Superconductors in One and Two Dimensions by Taylor L. Hughes	p. 193
Introducing the Bogoliubov-de-Gennes (BdG) Formalism for s-Wave Superconductors	p. 193
p-Wave Superconductors in One Dimension	p. 196
1-D p-Wave Wire	p. 196
Lattice p-Wave Wire and Majorana Fermions	p. 199
2-D Chiral p-Wave Superconductor	p. 201
Bound States on Vortices in 2-D Chiral p-wave Superconductors	p. 206
Problems	p. 211
Time-Reversal-Invariant Topological Superconductors by Taylor L. Hughes	p. 214
Superconducting Pairing with Spin	p. 214
Time-Reversal-Invariant Superconductors in Two Dimensions	p. 215
Vortices in 2-D Time-Reversal-Invariant Superconductors	p. 218
Time-Reversal-Invariant Superconductors in Three Dimensions	p. 219
Finishing the Classification of Time-Reversal-Invariant Superconductors	p. 222
Problems	p. 224
Superconductivity and Magnetism in Proximity to Topological Insulator Surfaces by Taylor L. Hughes	p. 226

Generating 1-D Topological Insulators and Superconductors on the Edge of the Quantum-Spin Hall Effect	p. 226
Constructing Topological States from Interfaces on the Boundary of Topological Insulators	p. 228
Problems	p. 234
Appendix: 3-D Topological Insulator in a Magnetic Field	p. 237
References	p. 241
Index	p. 245
