Evolution of Nuclear Observables in the Spherical-Deformed Phase Transition and the Interacting Boson Model p. 187
Shell Model Representation with Antibound States p. 193
Symmetry Conserving Mean-Field Theory and Applications for Halo Phenomena at the Neutron Drip Line p. 199
Neutrons and Protons--Vive la Difference p. 207
Posters
The Transition between Axial and Triaxial Structure in the IBM-2 p. 215
How to Measure the Spreading Width of Superdeformed Nuclei p. 217
Role of the Intruder Level in Upper-pf Shell Nuclei p. 219
Global and Local Behaviour of Nuclear Ground-State Properties as Fingerprints to Shape Coexistence in the Lead Isotopes p. 221
Open Questions in Stellar Nuclear Physics: II p. 223
Mixed-Symmetry States in [superscript 96]Mo p. 225
On Solvable Bohr Hamiltonians p. 227
Evolution of the N = 32, 34 Shell Closures p. 229
Properties of [superscript 68-76]Ni Isotopes with New Effective Interaction p. 231
Influence of Diffractive Interactions on Cosmic Ray Air Showers p. 233
Exciting Effects of Excited 0[superscript +] Energies p. 235
Measurement of the Efficiency of a Neutron Detector Array p. 237
Shape Coexistence in Neutron-Deficient Pt Isotopes in a Configuration Mixing IBM p. 239
Distribution of the GT Strength Starting from the Ground State of [superscript 14]N p. 241

A Toy Model for QCD: Hadrons, Penta- and Heptaquarks p. 243
Isospin Purity in the A=42 Isobars p. 245
Population of [superscript 195]Os Via a Deep-Inelastic Reaction p. 249
Excited Bands in Even-Even Rare-Earth Nuclei p. 251
Two-Dimensional Fourier Analysis of the Nuclear Mass Errors p. 253
List of Participants p. 257
Program p. 259
Author Index p. 263
