Measure technology for strongly swirling fluid flow in cyclone separators: application and comparison  
On measurement property of vortex flowmeter in bubbly two-phase flows  
Analyses of characteristics of ring-shaped electrostatic meter  
On-line electromagnetic wave based coal concentration monitoring technique for pipe flow  
Concurrent measurement of 2-D temperature distributions and radiative properties of pulverized-coal-fired flame in a 670 t/h boiler furnace  
Development of system and method for serial measurement of phase permeability of sandstone core samples during filtering of water, oil and gas  
The information content in NIR spectral data for slurries of organic crystals  
Visual observations of flow and phase phenomena in loop heat pipes  
Measurement of solid-liquid two-phase flow using a new robust normal-line hough transform method  
Two-phase flow regime identification combining conductivity probe signals and artificial neural network  
Influence of blocking flow on flow characteristic of electronic expansion valve  
Application of a capacitance solid mass flow meter in a dense phase pneumatic conveying system of pulverized coal  
Measurement of interfacial area transport in oil-water dispersed flow by double-sensor probe  
Measurement of refractive index profile of GI-POF by using least square method  
Particle size analysis by transmission fluctuation spectrometry with temporal correlation: theory and simulations on particle overlapping  
Multi-scale analysis of flow velocity of drag-reducing surfactant solutions  
A new method for monitoring branch pipes of PCI into BF  
Time-serial analysis on gas-liquid two-phase bubbly flow using POD  
Experimental investigations on performance of collision-block-type concentrator using fiber optic probe  
On-line measurement of the shape and growth rates of organic crystals in reactors: advances and perspectives for control  
Volterra filter forecasting method based on chaotic time serried and its application to fire smoke flow  
Determination of minimum agitation speed for complete solid suspension using four electrode conductivity method  
Application of phase doppler particle anemometer for studying turbulent gas-particle flows at Tsinghua University  
Volumetric fraction dynamic measurement in oil-water-gas multiphase horizontal pipe flow with dual energy gamma-ray  
Development of a precise and in situ turbidity measurement system  
Research of the PIV technology used to measure the liquid-solid two-phase flow in the pump  
On the measurements of particles smaller than 20 [μM] by global rainbow refractometry  
The impact of the PDA measurement method in forward scatter on the concentration of gas-particle two phase flow  
Experimental study on in-situ concentration monitoring of flue gas from the fixed pollution source based on DOAS
PIV experimental study on electrostatic spray of pressure-swirl atomizer with annular electrode p. 447
A PIV measurement and numerical simulation of gas-liquid two-phase flow in an aeration tank p. 453
Glare spot phase doppler anemometry p. 458
Design and testing of a new miniature combined optical/pneumatic wedge probe for the measurement of steam wetness p. 464
Exploration on the testing method of flow field in near-wall area with PIV p. 480
Laser-induced incandescence of soot particles in the flue gas evolved by coal pyrolysis p. 487
Measurements on CO concentration and gas temperature at 1.58 um with tunable diode laser absorption spectroscopy p. 499
Resonance shift and q-factors of distortional liquid droplet p. 509
Developments of an adaptive stereoscopic-PIV system for the analyses of the flow-structure interactions(Fsi) of air lifted bodies p. 514
Conductance sensor for measurement of the fluid watercut and flowrate in production wells p. 525
Spray characteristics determination of water mist for suppressing pool fire p. 530
Effect of slug flow on pipe vibration in horizontal pipeline p. 537
Study on the horizontal-well injection profile logging interpretation technology p. 542
A new ice slurry-system combined with liquid-dehumidifying p. 549
Experimental study on motion of inhalable particles in acoustic field based on microscopical visualization p. 555
Research on resistance properties for dense phase pneumatic conveying of pulverized coal in vertical pipe at different pressures p. 561
Development characteristics of velocity transports in an isothermal heated drag-reducing surfactant solution flow p. 566
Experimental investigation on flow characteristics of pulverized coal dense-phase pneumatic conveying at high pressure p. 574
A study on turbine unsteady flow via PIV and hotwire p. 580
Experimental study on capture of PM[subscript 10] emitted from coal combustion with high gradient magnetic field p. 587
Experimental investigation on agglomeration of coal-fired PM[subscript 10] in uniform magnetic field p. 593
Experimental studies on the measurement of oil-water two-phase flow p. 600
Estimation of liquid wall and interfacial shear stress in horizontal stratified gas-liquid pipe flow p. 610
A study of ultrasonic radiation dissipation in powder processing system p. 617
Multiphase flow measurement system of oil well p. 625
Methods of evaluating bubble boundary definition using characteristic parameters of bubble boundary p. 629
Experimental investigations of two-phase boiling flow in a complicated channel p. 636
Determination of polychlorinated diben-p-dioxins and dibenzofurans in flue gas by high resolution gas chromatography coupled with high resolution spectrometry p. 643
Mercury emission measurement in coal-fired boilers by continuous mercury monitor and ontario hydro method p. 647
Measurement of particle size distribution and volume concentration based on ultrasonic attenuation spectrum in fat emulsion

Measurement of three-dimensional temperature distribution in an absorbing, emitting, and anisotropically scattering medium

On-line measurement of soot concentration in duct using scattering-transmission method

Experimental study on performance of turbine flowmeter and venturi meter in oil-water two-phase flow measurement

Analysis on dynamic differential pressures of multi-loop flowmeter for the measurement of gas-liquid two-phase flow

Numerical simulation of optic-pneumatic combined probe in on-line measurement of pulverized coal

Ultrasonic method for concentration and particle size analysis in dense coal-water slurry

Measurement of water fraction in liquid hydro-carbons using ECT sensor

Wire-mesh capacitance tomography in gas-liquid flows

Design of an electrical impedance tomography sensor for flow measurement in an oscillatory baffled reactor

AC-based capacitance tomography system with small-diameter and high-pressure pipe

Gas-liquid two-phase flow measurement with dual-plane ERT system in vertical pipes

Optimization design of sensor in electromagnetic tomography system

Dynamic flow behavior measurements in gas-solid fluidized beds using different non-intrusive techniques and polyethylene powder

High resolution gamma ray tomography and its application to the measurement of phase fractions in chemical reactors

Investigating the liquid distribution in a reactive distillation packing using high energy x-ray tomography

Particle field characterization by digital in-line holography

Visualization of flow pattern in thermosyphon by ECT

Investigating jet mixing using electrical resistance tomography

Electrical impedance tomography with square sensor

Simulation studies on the on-line concurrent measurement of velocity and size distribution of pneumatically conveyed particles through digital imaging

A hybrid image reconstruction algorithm for electrical capacitance tomography

Characterization of window functions for regularization of electrical capacitance tomography image reconstruction

New image reconstruction methods for ECT measurement in gas-solids two-phase flow

Visualization of water vaporization during electrical heating process with x-ray tomography

FPGA based data acquisition and processing for gamma ray tomography

Interpretation of CT-scan sinograms to study the dynamic flow properties of a fluidized bed

Electrical resistance imaging of two-phase flow through rod bundles
Nonlinear image reconstruction using a GA-ECT technique in electrical capacitance tomography  p. 850
X-ray Visualization measurement of slurry flow in solid propellant casting  p. 863
Measurement of gas holdup profiles in a gas liquid cocurrent bubble column using electrical resistance tomography  p. 869
Gas-liquid two-phase flows inverse analysis in an aeration tank  p. 877
Visualization study of the effect of the prolonged vertical tube on the separation performance of a cyclone  p. 883
In-situ measurement of two-phase fraction in jet-pump using the ERT technique  p. 890
Particle swarm optimization technique for elliptic region boundary estimation in electrical impedance tomography  p. 896
3-D turbulent premixed flamelet stretch visualization based on high speed stereoscopic image  p. 902
Total variation regularization used in electrical capacitance tomography  p. 911
