Vehicle speed changes and accelerations associated with curb impacts and a comparison to HVE SIMON
Stopping distance and acceleration performance of personal watercraft
The application and reliability of commercial vehicle event data recorders for accident investigation and analysis
Introduction of pulse shapes and durations into impulse-momentum collision models
Tachograph chart - analysis of intensive braking recording
Vehicle characterization through pole impact testing, part II: analysis of center and offset center impacts
Delta-V, barrier equivalent velocity and acceleration pulse of a vehicle during an impact
Application of force balance method in accident reconstruction
Validation of the circular trajectory assumption in critical speed
The accuracy and sensitivity of 2003 and 2004 general motors event data recorders in low-speed barrier and vehicle collisions
Analysis of axle shaft failures for use in crash reconstruction
Uncertainty study of road accident reconstruction - computational methods
Off-throttle turning performance of personal watercraft for accident reconstruction
Crush and conservation of energy analysis: toward a consistent methodology
Override/underride crush energy: results from vertically offset barrier impacts
A parametric study of frictional resistance to vehicular rotation resulting from a motor vehicle impact
The effects of seated position on occupant kinematics in low-speed rear-end impacts
The effect of residual damage interpolation mesh fineness on calculated side impact stiffness coefficients
The accuracy of crash data from Ford restraint control modules interpreted with revised Vetronix software
