Message from the General Chair
Message from the Technical Program Co-Chairs
Conference Committee
Low Cost IC Prototyping from the MOSIS Service p. 1
Advanced Low Cost Manufacturing from CMP Service p. 4
From Prototyping to Small Volume - The EUROPRACTICE Global ASIC Solution p. 6
Standard Design Flows of Logic LSIs in Japanese Universities and VDEC p. 8
Supporting Canadian University Interests in Microelectronics and Microsystems p. 10
Training IP Creators and Integrators p. 12
Curriculum-Related Strategies to Attract and Retain Undergraduates in Disciplines of Interest to the Semiconductor Industry p. 14
Using the Altera UP-1 Board for Prototyping and VGA Video Display Generation p. 16
Microelectronic Systems Education in Slovakia p. 18
A Successful Distance-Learning Experience for IC Test Education p. 20
VLSI Design and Test Sequence in an Academic Environment: A Case Study p. 22
Educational Application of Virtual Instruments Based on Reconfigurable Logic p. 24
Automated Team Project Management and Evaluation Through Interactive Web Modules p. 26
Realization and SEM Observation of Polysilicon and Aluminium Cantilever Using Surface Micromachining Technology p. 28
DIPS for MIPS: An Instrumented VHDL/Corba Kernel for Distributed Learning in EECS p. 30
A Project-oriented Master Program in "DSP Algorithms and ASIC Architectures" p. 32
The "Studio Design" Approach in the Electrical and Electronic Curricula p. 34
A New Industrial Approach Compatible with Microelectronics Education: Application to an RF System Design p. 37
A Multimedia Virtual Lab for Digital Logic Design p. 39
Hardware-Software Co-verification in an Undergraduate Laboratory p. 41
Microelectronics Education Using WWW p. 43
 Analog Microsystem Design Education via the World Wide Web p. 45
 A PC-based Educational Tool for CMOS Integrated Circuit Design p. 47
 The ALBA Experience: A Multi-University MSc in System Level Integration p. 49
 Object Oriented Approach for Modeling Digital Circuits p. 51
 Using RASSP Modules in a Rapid System Prototyping Class p. 53
 Teaching Pipelining and Concurrency Using Hardware Description Languages p. 55
 Alternatives in Teaching System-Building Skills p. 57
 Hierarchical Analogue Design and Behavioral Modeling p. 59
 An Educational System of LSI Design with Free-Wares for VDEC p. 61
 Student Projects Integration to University Microsystem Center p. 63
 Teaching Microelectronic-based Integrated Systems Design and Test p. 65
 Signal Integrity: An Interactive Multimedia Course p. 67
 Student Realization in Cleanroom of Silicon-Germanium Thin Film Transistors p. 69
 Diagonal Examples for Design Space Exploration in an Educational Environment City-1 p. 71
FPGA Design Projects with Animated Problems p. 74
Hardware Course Using KUE-CHIP2 Boards with FPGAs p. 76
Active Learning in an Electronic Design Automation Course p. 78
A Project Oriented Design and Build Course on Wearable Computers p. 80
Experiments on Multimedia Support of VLSI Design Teaching in the MODEM Project p. 82
VRML and Microelectronics Education p. 84
Tools for Integrating Multidomain Technologies into Microelectronic Circuit Design Curricula p. 86
Infrastructure and Course Progression for Complex IC Design Education p. 88
Problems of the Development of the System for Distance Learning for Transitional Economy p. 90
The Teaching of Microelectromechanical Systems (MEMS) p. 92
Intel’s College Hiring Methods and Recent Results p. 94
The Effect of ABET’s EC2000 on Curriculum: Early Indications p. 97
Author Index p. 103
