Preface p. ix
Organizing Committee p. x
Program Committee p. xi
Referees p. xii
Keynote Speakers p. xiii
Invited Talk Abstracts
Suffix Trees (and Relatives) Come of Age in Bioinformatics p. 3
Genome Annotation and Protein Structure p. 4
Decoding Noncoding Regulatory DNAs in Metazoan Genomes p. 5
Phylogenetics
[Phi]-LOG: A Domain Specific Language for Solving Phylogenetic Inference Problems p. 9
AxML: A Fast Program for Sequential and Parallel Phylogenetic Tree Calculations Based on the Maximum Likelihood Method p. 21
Motif Finding
Visualization of K-Tuple Distribution in Procaryote Complete Genomes and Their Randomized Counterparts p. 31
Fast and Sensitive Algorithm for Aligning ESTs to Human Genome p. 43
Rapid Large-Scale Oligonucleotide Selection for Microarrays p. 54
Parallel Monte Carlo Methods for Physical Mapping of Chromosomes p. 64
Genotype-Phenotype
PheGe, the Platform for Exploring Genotype-Phenotype Relations on Cellular and Organism Level p. 79
Automated Identification of Single Nucleotide Polymorphisms from Sequencing Data p. 87
Database Mining
A Multi-Level Text Mining Method to Extract Biological Relationships p. 97
A Literature Based Method for Identifying Gene-Disease Connections p. 109
Protein-Based Analysis of Alternative Splicing in the Human Genome p. 118
Comparative Genomics
Constrained Multiple Sequence Alignment Tool Development and Its Application to RNase Family Alignment p. 127
Fast and Sensitive Alignment of Large Genomic Sequences p. 138
Biological Networks
Design of Genetic Switches with Only Positive Feedback Loops p. 151
Proteomics
An Efficient Branch-and-Bound Algorithm for the Assignment of Protein Backbone NMR Peaks p. 165
Towards Automatic Clustering of Protein Sequences p. 175
A Bi-Recursive Neural Network Architecture for the Prediction of Protein Coarse Contact Maps p. 187
Prediction of Protein Function Using Protein-Protein Interaction Data p. 197
Accelerating Approximate Subsequence Search on Large Protein Sequence Databases p. 207
Gene Expression
