Message from the Program Chairs p. xi
Committees p. xii
Reviewers p. xvi
Sensor Networks
Scheduling Communication in Real-Time Sensor Applications p. 10
A Wakeup Scheme for Sensor Networks: Achieving Balance between Energy Saving and End-to-End Delay p. 19
Radio-Triggered Wake-Up Capability for Sensor Networks p. 27
Wireless and Ad Hoc Networks
Fair: Fee Arbitrated Incentive Architecture in Wireless Ad Hoc Networks p. 38
Energy-Aware Traffic Shaping for Wireless Real-Time Applications p. 48
Harmonica: Enhanced QoS Support with Admission Control for IEEE 802.11 Contention-based Access p. 64
Energy Management
Energy-Responsiveness Tradeoffs for Real-Time Systems with Mixed Workload p. 74
Feedback EDF Scheduling Exploiting Dynamic Voltage Scaling p. 84
Design of Digital Control Systems with Dynamic Voltage Scaling p. 94
Embedded System Design
Automated Functional Test Case Synthesis from Thales Industrial Requirements p. 104
The Design and Performance of a Real-Time Notification Service p. 112
The Design and Implementation of Real-Time CORBA 2.0: Dynamic Scheduling in TAO p. 121
Configurable Event Communication in Cadena p. 130
Embedded System Performance
CCMPerf: A benchmarking tool for CORBA Component Model Implementations p. 140
Speeding Up String Matching Over Compressed Text on Handheld Devices Using Tagged Sub-optimal Code (TSC) p. 148
Proposal and Evaluation for Organising and Using Available Data for Software Performance Estimations in Embedded Platform Development p. 156
Storage Access Support for Soft Real-Time Applications p. 164
Automotive Applications
Real-Time Video Analysis on an Embedded Smart Camera for Traffic Surveillance p. 174
Data Management in Real-Time Systems: A Case of On-Demand Updates in Vehicle Control Systems p. 182
An Embedded Architectural Framework for Interaction between Automobiles and Consumer Devices p. 192
Resource Management - 1
IRIS: A New Reclaiming Algorithm for Server-Based Real-Time Systems p. 211
Component Allocation with Multiple Resource Constraints for Large Embedded Real-Time Software Design p. 219
Coordinated Search and Track by Multiple Phased Array Radars

Operating Systems

Adaptive reservations in a Linux environment
Supporting Dynamic QoS in Linux
RT-Frontier: A Real-Time Operating System for Practical Imprecise Computation
Enhancing the AvrX Kernel with Efficient Secure Communication Using Software Thread Integration

Embedded and Real-Time Middleware

Integrated Adaptive QoS Management in Middleware: A Case Study
Dynamic CPU Management for Real-Time, Middleware-Based Systems
CAMRIT: Control-Based Adaptive Middleware for Real-Time Image Transmission
Middleware Specialization for Memory-Constrained Networked Embedded Systems

Robotic Applications

Feedback-Based Real-Time Scheduling in Autonomous Vehicle Systems
A Real-Time Image Recognition System for Tiny Autonomous Mobile Robots
A Real-Time Model for the Robotic Highway Safety Marker System
Statistical Verification of Two Non-linear Real-Time UAV Controllers

Feedback Performance Control

Adaptive Resource Allocation Control with On-Line Search for Fair QoS Level
Maximizing the Use of Computational Resources in Multi-Camera Feedback Control
Online Control for Self-Management in Computing Systems
Incorporating Cost of Control into the Design of a Load Balancing Controller

Embedded Design Trade-Offs

Realistic Analysis of Limited Parallel Software / Hardware Implementations
Smart Sensor Architecture Customized for Image Processing Applications
Scheduling of Iterative Algorithms on FPGA with Pipelined Arithmetic Unit
Design Tradeoffs in Networks with Soft End-to-End Timing Constraints

Resource Management - 2

Automated Reference-Counted Object Recycling for Real-Time Java
Real-Rate Scheduling
Real-Time Task with Data Output
Quantitative Characterization of Event Streams in Analysis of Hard Real-Time Applications

Real-Time Schedulability Analysis

Efficient Response-Time Analysis for Tasks with Offsets
Tuning the WCET of Embedded Applications
Incremental Satisfiability Counting for Real-Time Systems
Empirical Quantification of Pessimism in State-of-the-Art Scheduling Theory Techniques for Periodic and Sporadic DRE Tasks

Real-Time Communication

Static Real-Time Data Distribution
Disseminating Dynamic Data with QoS Guarantee in a Wide Area Network: A Practical Control Theoretic Approach
