Smart play-out extended: time and forbidden elements p. 2
Conceptual modeling: a key to quality information systems p. 12
Comparing several coverage criteria for detecting faults in logical decisions p. 14
Automatic generation of Markov chain usage models from real-time software UML models p. 22
Towards the application of classification techniques to test and identify faults in multimedia systems p. 32
A mechanically proved development combining B abstract systems and spin p. 42
Equational approach to formal verification of SET p. 50
A first step towards formal verification of security policy properties for RBAC p. 60
Evaluating several path-based partial dynamic analysis methods for selecting black-box generated test cases p. 70
Adaptive random testing through dynamic partitioning p. 79
Symbolic execution of program paths involving pointer and structure variables p. 87
Towards a functional size measure for object-oriented systems from requirements specifications p. 94
Machine-learning techniques for software product quality assessment p. 102
Assessment of the requirement management process using a two-stage questionnaire p. 110
Improving software inspection process with patterns p. 118
Intelligent tool-based agents for software architecture evaluation p. 126
Creating organic software maturity attitudes (COSMA) selected principles and activities for software maturity in small and medium software enterprises p. 134
On the statistical properties of the F-measure p. 146
Architecting product diversification - formalizing variability dependencies in software product family engineering p. 154
Using knowledge management to improve software process performance in a CMM level 3 organization p. 162
Website complexity metrics for measuring navigability p. 172
Reliability improvement of web-based software applications p. 180
Component based system architecture for railway infrastructure management systems p. 189
Towards a control-theoretical approach to software fault-tolerance p. 198
A methodology for constructing maintainability model of object-oriented design p. 206
COSTUME: a method for building quality models for composite COTS-based software systems p. 214
Quality-assured design of on-line analytical processing systems using abstract state machines p. 224
A contract-based component model for embedded systems p. 232
Hierarchic decomposition in agent oriented conceptual modeling p. 240
Semantic errors in SQL queries: a quite complete list p. 250
Antipattern-based detection of deficiencies in Java multithreaded software p. 258
A test case generation algorithm for real-time systems p. 274
