Araneola: a scalable reliable multicast system for dynamic environments p. 5
PCoord: network position estimation using peer-to-peer measurements p. 15
HyperTree for self-stabilizing peer-to-peer systems p. 25
Intrusion tolerance for Internet applications p. 35
GeoPeer: a location-aware peer-to-peer system p. 39
WonGoo: a pure peer-to-peer full text information retrieval system based on semantic overlay networks p. 47
Exploring the network/software boundary: a telecommunications perspective p. 57
Objective-greedy algorithms for long-term Web prefetching p. 61
A protocol for improved user perceived QoS in Web transactional applications p. 69
WALTy: a user behavior tailored tool for evaluating Web application performance p. 77
Downloading replicated, wide-area files - a framework and empirical evaluation p. 89
Non-uniform information dissemination for dynamic grid resource discovery p. 97
Group communication: where are we today and future challenges p. 109
Compiling IOA without global synchronization p. 121
Towards JMS compliant group communication - a semantic mapping p. 131
A methodological construction of an efficient sequential consistency protocol p. 141
The response to IT complexity: autonomic computing p. 151
Frequent episode rules for Internet anomaly detection p. 161
Performance analysis of cryptographic protocols on handheld devices p. 169
The LC assignment policy for cluster-based servers p. 177
ViSMI: software distributed shared memory for InfiniBand clusters p. 185
Dynamic key messaging for cluster computing p. 192
Are processors free?: impact on RDMA and protocol off-load technologies p. 203
Speculative network processor for quality-of-service-aware protocol processing p. 207
A novel switch architecture for high-performance computing and signal processing networks p. 215
An iterative switching algorithm with (possibly) one iteration p. 223
On the relationship between packet size and router performance for heavy-tailed traffic p. 235
An adaptive admission control algorithm for bandwidth brokers p. 243
Context-based access control management in ubiquitous environments p. 253
Location-triggered routing protocol in mobile ad hoc networks p. 261
Using a task-specific QoS for controlling sensing requests and scheduling p. 269
Towards flexible finite-state-machine-based protocol composition p. 281
The Nepi network programming system: a programming environment for distributed systems p. 287
Infopipes: the ISL/ISG implementation evaluation p. 293
A multi-policy, cooperative playback control protocol p. 297
FIONA: a fault injector for dependability evaluation of Java-based network applications p. 303
Request distribution-aware caching in cluster-based Web servers p. 311
A fast polling I/O implementation with real-time signals p. 317
Myrinet networks : a performance study p. 323
Traveling token for dynamic load balancing p. 329
Shared protection for time slotted optical networks p. 333
Context-awareness for impromptu collaboration in MANETs p. 339
Intrusion detection in sensor networks : a non-cooperative game approach p. 343
Resilient peer-to-peer multicast from the ground up p. 351
Performance of the NAS parallel benchmarks on grid enabled clusters p. 356
VIPSEC : virtualized and pluggable security services infrastructure for adaptive grid computing p. 362
Volunteer availability based fault-tolerant scheduling mechanism in desktop grid computing environment p. 366
A fair synchronization protocol with cheat proofing for decentralized online multiplayer games p. 372
Towards a quality of service aware public computing utility p. 376
Optimal parameter selection for efficient memory integrity verification using Merkle hash trees p. 383
Towards an approach for automatically repairing compromised network systems p. 389
Implementation of distributed key generation algorithms using secure sockets p. 393
Distance measurement in volunteer computing networks : a completely decentralized approach p. 399
Self-healing in group key distribution using subset difference method p. 405
A framework for multi-agent system engineering using ontology domain modelling for security architecture risk assessment in e-commerce security services p. 409
