Process-annotated service discovery facilitated by an n-gram-based index p. 2
Solving Qos-driven Web service dynamic composition as fuzzy constraint satisfaction p. 9
Reliable Web services composition using a transactional approach p. 15
A broker-based framework for QoS-aware Web service composition p. 22
Continuous call double auctions with indivisibility constraints p. 32
An adaptive attitude bidding strategy for agents in continuous double auctions p. 38
DR-NEGOTIATE : a system for automated agent negotiation with defeasible logic-based strategies p. 44
Automatic negotiation with mediated agents in E-commerce marketplace p. 50
Semantic mapping with multi-agent systems p. 54
Consistency between executable and abstract processes p. 60
Achieving survivability in business process execution language for Web services (BPEL) with exception-flows p. 68
From multi-context business collaboration models to context-specific ebXML BPSS p. 75
Codifying business and process models for service-based eBusiness propositions p. 81
Business processes and workflow coordination of Web services p. 85
Process-oriented business performance management with petri nets p. 89
DSA-based verifiable and recoverable encryption of signatures and its application in certified E-goods delivery p. 94
Protect E-commerce against DDoS attacks with improved D-WARD detection system p. 100
A secure anonymous authorisation architecture for E-commerce p. 106
On splitting public keys for the public key infrastructure p. 112
Adaptive bucket formation in encrypted database p. 116
Evaluation methodology for the security of e-finance systems p. 120
Navigational structure mining for usability analysis p. 126
Matrix model for Web page community p. 132
An approach to support Web service classification and annotation p. 138
Personalized Web search with self-organizing map p. 144
Personalization techniques for Web search results categorization p. 148
Ontology-based information retrieval model for the semantic Web p. 152
SLA representation, management and enforcement p. 158
Overview on decentralized establishment of consistent multi-lateral collaborations based on asynchronous communication p. 164
On self-coordinating Web services using similarity and neural networks p. 171
SophiNode : an efficient service discovery system of decentralized E-commerce p. 177
QoS aggregation in Web service compositions p. 181
An agent-based model for Web services transaction processing p. 186
A Web registry for publishing and discovering mathematical services p. 190
Developing e-business portals with dynamic multi-level workflows on the multi-layer grid p. 196
Background knowledge driven ontology discovery p. 202
Distributed reasoning based on problem solver markup language (PSML) - a demonstration through extended OWL p. 208
Semantic-based context-role model for Web information sharing p. 214
Real-time business intelligence in multi-agent adaptive supply networks p. 218
A heuristic algorithm for agent-based grid resource discovery p. 222
Business process design and implementation for customer segmentation e-services p. 228
Enhancing e-CRM in the insurance industry by mobile e-services p. 235
An empirical study on the e-CRM performance influence model for service sectors in Taiwan p. 240
A systematic approach to the development of E-commerce sites for mass customization p. 246
Service demand analysis using customer-choice behavior modeling, with consideration of awareness and perception p. 250
Some issues for the modelling of interactive e-services from the customer multi-channel interaction perspectives p. 256
A reputation and trust management broker framework for Web applications p. 262
A distributed reputation management scheme for mobile agent-based E-commerce applications p. 270
A secure electronic contract management and process system automated with predefined tasks p. 276
Authenticating mobile agent platforms using signature chaining without trusted third parties p. 282
A trust agent for E-commerce: looking for clues p. 286
A distributed trust model for e-commerce applications p. 290
The nature of supply chain sophistication: an exploratory study of the transport industry in New Zealand p. 296
Economic production quantity for supply chain system with volume flexibility p. 302
Supply chain management: a multi-agent system for collaborative production planning p. 309
Specification of composite trading activities in supply chain management p. 315
A strategic quick response approach for dynamic supply chain management of perishable goods p. 323
Web service intelligent agent structure for supply chain management (SCM) p. 329
Intelligent techniques for global E-business Web portal development p. 334
Correlating alerts with a data mining based approach p. 341
Detecting buzz from time-sequenced document streams p. 347
Learning the kernel matrix for XML document clustering p. 353
Trading decision maker: stock trading decision by price series smoothing and tendency transition inference p. 359
Loan risk analyzer based on fuzzy logic p. 363
Study on construction and integration of military domain ontology, situation ontology and military rule ontology for network centric warfare p. 368
Web services workflow for power system security assessment p. 374
Reasoning over ontologies of on demand service p. 381
A design methodology for user access control (UAC) middleware p. 385
A request dispatching policy for Web server cluster p. 391
Intelligent Kanban: evaluation of a supply chain MAS application using benchmarking p. 396
Multi-agent-based architecture and mechanism for coordination and execution in agile supply chain operational management

A pattern language for decentralized coordination and negotiation protocols

From market-driven e-negotiation to market-driven g-negotiation

DR-BROKERING - a defeasible logic-based system for semantic brokering

Composition of negotiation protocols for E-commerce applications

Hybrid composition of Web services and grid services

On tracking personalized Web services using views

A new approach for context aware SOA

On comprehensive contractual descriptions of Web services

A petri-net based validator in reliability of a composite service

Web service-oriented enterprise architecture for mobility support in prescription management

Efficient distributed XML data management for mobile commerce

Exceptional handling for XML query execution plans in a Web service environment

A differential-analysis approach for improving SOAP processing performance

E-voting : a scalable approach using XML and hardware security modules

Compression of XML physiological data streams to support neonatal intensive care unit Web services

Bridging knowledge bases' heterogenity using XML/XSLT approach

A Web services based framework for the transmission of physiological data for local and remote neonatal intensive care

Resilient dissemination of events in a large-scale event notification service system

Web system trace model using a Web application architecture framework

Performance-sensitive service provision in active digital libraries

Straight through processing for corporate foreign exchange trading lessons learned from a Web service based implementation

Event-based ontology design for retrieving digital archives on human religious self-help consulting

Mobile agents for secure electronic commerce transactions with privacy protection of the customers

Maturing e-privacy with P3P and context agents

Trustworthy browsing - a secure Web accessing model

Certified e-mail protocol with verifiable third party

An electronic payment system architecture for composite payment transactions

The practical detailed requirements of accountability and its application in the electronic payment protocols

Generic E-learning data structure and Web teaching

Alert driven communications management for distance learning

A critiquing system to support English composition through the use of latent semantic analysis

From education to e-learning : a union catalog service of learning resources

Collaborative T-learning : bringing greater levels of interactivity into the home
A shareable e-learning platform using data grid technology  p. 592
Who counts your votes? p. 598
Personalized user preference elicitation for e-services p. 604
The reality of e-service in the public sector: a local government perspective p. 612
eGOvSM metadata model: towards a flexible, interoperable and scalable eGovernment service marketplace p. 618
A cross border collaboration environment, as a means for offering online public services and for evaluating the performance of public executives p. 622
Service quality in Internet banking: a user-based core framework p. 628
wsBus: QoS-aware middleware for reliable Web services interactions p. 634
The design and evaluation of P2P transactive memory system p. 640
A service-oriented architecture for tele-immersion p. 646
Fast teaming on P2P networks based on expertise and relation p. 650
Two-phase peer evaluation in P2P E-commerce environments p. 654
AVATAR: a multi-agent TV recommender system using MHP applications p. 660
Applying e-transportation to traffic evacuation management under human-caused threats p. 666
Information stream oriented content adaptation for pervasive computing p. 674
Flexible application rights management in a pervasive environment p. 680
A secure mobile track and trace system for anti-counterfeiting p. 686
Predicting the survival or failure of click-and-mortar corporations p. 692
Integrated vulnerability management system for enterprise networks p. 698
ITIL as common practice reference model for IT service management: formal assessment and implications for practice p. 704
A new framework for B2E portal development p. 711
Towards effective Web site designs: a framework for modeling, design evaluation and enhancement p. 716
Towards access control for visual Web model management p. 722
Facilitation of e-meetings: state-of-the-art review p. 728
Caribou: a supporting environment for software e-development p. 736
Content metrics for products and services categorization standards p. 740
Automatic content-based recommendation in e-commerce p. 748
Semantic feedback for hybrid recommendations in recommendz p. 754
Collaborative filtering guided exploration in multi agent filtering framework p. 760
A dynamic framework for maintaining customer profiles in E-commerce recommender systems p. 768
Feature selection methods for conversational recommender systems p. 772
The EEE-05 challenge: a new Web service discovery and composition competition p. 780
Efficient Web service composition based on syntactical matching p. 782
BF: Web services discovery and composition as graph search problem p. 784
Service composition in a secure agent-based architecture p. 787
Web service discovery and composition using the Web service integration gateway p. 789
Web service discovery and composition with MOVE p. 791
