Software engineering - components, interfaces, behaviors

Acquiring dominant compound terms to build Korean domain knowledge bases p. 2
Genetic algorithm implementation in python p. 8
Kernel based intrusion detection system p. 13
An effective real time update rule for improving performances both the classification and regression problems in kernel methods p. 19
Knowledge-based compliance management systems - methodology and implementation p. 25
Design of translator for stack-based codes from 3-address codes in CTOC p. 32
A reflective practice of automated and manual code reviews for a studio project p. 37
Design and implementation of UML based mobile integrated management system p. 43
Design and implementation of forced unmount p. 49
Development of embedded software with component integration based on ABCD architectures p. 54
A review approach to detecting structural consistency violations in programs p. 61
Mining frequent pattern using item-transformation method p. 698
PRBAC : an extended role based access control for privacy preserving data mining p. 68
RGSN model for database integration p. 74
An efficient workcase classification method and tool in workflow mining p. 80
Equivalence of transforming non-linear DACG to linear concept tree p. 86
Palmprint identification algorithm using Hu invariant moments and Otsu binarization p. 94
Natural image compression based on modified SPIHT p. 100
A development of the automatic digitizing system for power distribution facility images p. 105
Research on fast block participation mode selection algorithm in H.264 p. 111
Comparison of shape-based and stroke-based methods for segmenting handwritten Chinese characters p. 114
Use of SCTP for IP handover support p. 122
Multiuser CDMA parameters estimation using sigma point particle filter p. 127
MAMIP - interoperation mechanism of ad hoc network and IP network p. 133
A study on secure group transmission in group environment p. 139
A performance analysis model of PC-based software router supporting IPv6-IPv4 translation for residential gateway p. 144
An adaptive full parallel interference canceller with imperfect channel estimation for CDMA systems p. 707
Experience of combining qualitative and quantitative analysis methods for evaluating software architecture p. 152
On the benefits of industrial network : a new approach with market survey and fuzzy statistical analysis p. 158
A method for classification of electricity demands using load profile data p. 164
A generic software framework for the software system architecture design and implementation of handset devices p. 169
Incorporating semantics-based search and policy-based access control mechanism in context service delivery p. 175
Business process improvement using ebXML p. 181
Implementation on event notification service over multimedia framework

Streaming player support protocol adaptation and independent operating system

ebXML test framework on dually coupled asynchronous MSH

Implementation of prefix delegation mechanism using DHCPv6 protocol

Automatic generation of XForms code using DTD

A distributed platform for archiving and retrieving RSS feeds

Multi-granularity locks for XML repetitive

Generation of 3D facial expressions using 2D facial image

Security service framework for home network

Matchmaking algorithms to improve dynamic service matching in ubiquitous environments

A shortest-path network problem using an annealed ant system algorithm

A comprehensive middleware architecture for context-aware ubiquitous computing systems

An approach to extension of UML 2.0 for representing variabilities

Reengineering legacy source code to model driven architecture

A metalevel component-based framework for distributed computing applications

Realizing the open-closed principle

Performance improvement of cluster system by server status information

Performance estimations of clustered workflow architectures

A general scalable parallelizing of Strassen's algorithm for matrix multiplication on distributed memory computers

An effective cache overlapping storage structure for SMT processors

An evaluation of process performance for a small-team project - a case study

A reflective case study of software process improvement for a small-scale project

Taguchi-based metrics for software quality

Use of honeynets in computer security education

A process-driven e-Learning content organization model

On employing ontology to e-Learning

Impact of image organizations on multimedia document retrieval

Measuring personal information competency for organizational computing

Access control model for secure XML documents

Intelligent airbag deployment algorithm design and implemented by DSP chip

Development of incident detection model using neuro-fuzzy algorithm

A framework of context-awareness for ubiquitous computing middlewares

Data protection of multimedia contents using scalable digital watermarking

Concurrency control of spatial join on spatial database

Mining for context recognition in document filtering and classification

The design of a virtual prototyping based on ARMulator

Use of image processing to collect the time data of NC machining

Robust audio watermarking in wavelet domain using pseudorandom sequences

A vector-quantizer based method of speaker normalization
Wavelet transform based digital watermarking for image authentication
Performance evaluation technique of the RTSP based streaming server
Design of HDTS system for locating logical errors in Java programs
Development of quality evaluation metrics for BPM (business process management) system
Mock objects framework for TDD in the network environment
HW/SW codesigned implementation of IEEE 802.16 TDMA MAC for the subscriber station
LQ-routing protocol for mobile ad-hoc networks
Efficient mobility management for multimedia service in wireless IP networks
Proactive health care underpinned by embedded and mobile technologies
Protein knowledge extension based on Web database
AuToCrawler: an integrated system for automatic topical crawler
A model for application integration using Web services
Rank-based image transformation for entropy coding efficiently
Digital image filter design using evolvable hardware
DCT-based image compression using wavelet-based algorithm with efficient deblocking filter
Multibiometrics based on palmprint and hand geometry
Bundle authentication and authorization using XML security in the OSGi service platform
Device-independent markup language
Context awareness in large scale ubiquitous environments with a service oriented distributed middleware approach
Extending OBDD graphs for composite event matching in content-based pub/sub systems
Performance analysis on mobility of ad-hoc network for inter-vehicle communication
Design and implementation of policy decision point in policy-based network
Semantic Web enabled VHE for 3rd generation telecommunications
Design and implementation of QoS measurement and network diagnosing framework for IP multicast in advanced collaborative environment
Design of healthcare system for disabled person using eye blinking
Performance analysis of audio streaming in secure wireless access network
Two approaches for the improvement in testability of communication protocols
Enhanced distributed streaming system based on RTP/RTSP in resurgent ability
Visualizing hierarchical information using a new Focus+Context method
Video event understanding through building knowledge domain
An efficient connectivity compression for triangular meshes
The design and implementation of asset management system on the NGIS
Data broadcasting software architecture supporting real-time caching and monitoring in interactive TV
Oriental color ink rendering for landscape
Study on address allocation in ad-hoc networks
A call admission control scheme for heterogeneous service considering fairness in wireless networks p. 688
An effective multicast communication based on locality in mobile IPv6 networks p. 610
A novel vertical handoff strategy for integrated IEEE802.11 WLAN/CDMA networks p. 616
A development of the mobile computing system for repair and patrol of electric power facilities p. 622
Dependable public wireless LANs without hardware support p. 628
Using code division technique to improve the performance of ad hoc wireless network p. 634
Enhancing transparency and adaptability of dynamically changing execution environments for mobile agents p. 642
Service discovery using FIPA-compliant AP to support scalability in ubiquitous environments p. 647
Bounds on the multi-client incremental computing p. 653
Integration service for biological information resources using agent service to Web service gateway p. 659
Interactions and cooperation between machines as a society of agents p. 664
A conceptual architecture for the uniform identification of objects p. 670
Modeling uncertainty in context-aware computing p. 676
