Opening address

Resilience for the scalability of dependability

Effectiveness of traffic camouflaging over computer networks

New generation scalable and dependable servers

Challenges in mobile networking and information assurance

An adaptive reputation-based trust framework for peer-to-peer applications

LAWN: a protocol for remote authentication over wireless networks

pMIX: untraceability for small hiding groups

Decentralized schemes for size estimation in large and dynamic groups

Method for task migration in grid environments

A probabilistic approach for achieving fair bandwidth allocations in CSFQ

Supporting rate-based control in DiffServ networks

TCP new vegas: improving the performance of TCP vegas over high latency links

A concentric multi-ring overlay for highly reliable P2P networks

Dynamic quorums for DHT-based P2P networks

Scalable QoS-based event routing in publish-subscribe systems

Self-organization in cooperative content distribution networks

Providing hard real-time guarantees in context-aware applications: challenges and requirements

Using residual times to meet deadlines in M/G/C queues

Architectural issues of JMS compliant group communication

Developing a consistent domain-oriented distributed object service

A wide area network simulation of single-round group membership algorithms

C-CORE: using communication cores for high performance network services

Fundamental network processor performance bounds

Reducing the communication cost via chain pattern scheduling

Hopcount in application layer multicast schemes

Slingshot: time-critical multicast for clustered applications

On the effectiveness of continuous-time mixes under flow-correlation based anonymity attacks

Networking aspects in the DPASA survivability architecture: an experience report

A formal framework (expression + analysis) for network security mechanisms configuration

Smart tunnel union for NAT traversal

Block migration in broadcast-based multiprocessor architectures

Leveraging the multiprocessing capabilities of modern network processors for cryptographic acceleration

Multicast in fat-tree-based InfiniBand networks

Protocol composition frameworks: a header-driven model

SFS-KNOPPIX

Improving transaction server performance under heavy loads with differentiated service and active network interfaces
A policy-based management framework for pervasive systems using axiomatized rule-actions p. 255
Experimental evaluation of a QoS-aware application server p. 259
SLA based profit optimization in multi-tier systems p. 263
Controlling the coverage of grid information dissemination protocols p. 267
Cooperative mobile agents to gather global information p. 271
Coverage by randomly deployed wireless sensor networks p. 275
Location-based publish/subscribe p. 279
Performance evaluation of a PC-based active router and analysis of an active secure FTP application p. 283
