Generalized model checking
Indexing inventory snapshots
Time and the semantic Web
Using inference for evaluating models of temporal discourse
An efficient algorithm for minimizing time granularity periodical representations
Constraint-based qualitative simulation
A local method for prioritized fusion of temporal information
Temporal XML? : SQL strikes back!
"TellMe" : a novel protocol and location prediction scheme exploiting the "one for all" framework for location management
A multilevel distance-based index structure for multivariate time series
Temporal query languages expressive power : [μ]TL versus T-WHILE
CME : a temporal relational model for efficient coalescing
A uniform algebraic characterization of temporal functional dependencies
A trace semantics for positive core XPath
On the freeze quantifier in constraint LTL : decidability and complexity
Axiomatization and decidability of multi-dimensional duration calculus
Configuration logic : a multi-site modal logic
Quantitative temporal logics : PSpace and below
Temporal logic with predicate λ-abstraction
Deterministic CTL query solving
LOLA : runtime monitoring of synchronous systems
Exploiting the relationship between IA networks and finite domain CSPs
An XML-based framework for temporal database implementation
Probabilistic calculation of execution intervals for workflows
A data compression technique for sensor networks with dynamic bandwidth allocation
Specification patterns for time-related properties
Analysis of timed processes with data using algebraic transformations
Search strategies for resolution in CTL-type logics : extension and complexity
Propositional interval temporal logics : some promising paths
Time in Liverpool - an overview of temporal research in the logic and computation group
Version management and historical queries in digital libraries
Efficient rectangle indexing algorithms based on point dominance
