Anti-doping: an approach for grid integrity verification
An overlay data plane for PlanetLab
Stakes of next-generation communication services
Implementation of next generation VDSL networks in metro ethernet backbone environments
Packet classification using adaptive rules cutting (ARC)
Fast retransmission of real-time traffic in HIPERLAN/2 systems
Location-based geocasting and forwarding (LGF) routing protocol in mobile ad hoc network
Dynamic resource allocation algorithm for metropolitan optical packet-switched ring networks
Service management for end-to-end QoS multimedia content delivery in heterogeneous environment
On the on-line hose-model VPN provisioning
Policy-based network management in an integrated mobile network
A service-oriented architecture framework for mobile services
FRAMESEC: a framework for the application development with end-to-end security provision in the mobile computing environment
The use of distributed network-based IDS systems in detection of evasion attacks
Web services: self-adaptable trust mechanisms
An enhanced SOS architecture for DDoS attack defense using active network technology
RLS adaptation of widely linear minimum output energy algorithm for DS-CDMA systems
Impacts of packet filling in an optical packet switching architecture
Analyzing the effects of burst assembly in optical burst switching under self-similar traffic
Modelling multi-channel optical slotted rings with fixed transmitter and fixed receivers
End-to-end QoS implementation in a B3G network
Multi-service routing - a new QoS routing approach supporting service differentiation
Wireless link dimensioning: priority versus sharing
Implementing high speed IP address lookups in hardware
Multicast connections in a virtual circuit switching node
Intelligent multicast router discovery mechanism in mobile multicast
Performance analysis of multicast routing protocol PIM-SM
Placement of repair proxies to improve inter-receiver delivery delay fairness in hierarchical reliable multicast networks
Multiuser detection and blind adaptive vector channel estimation for CDMA systems in mobile channels
A policy based context-aware agent framework to support users mobility
Using neural networks to classify Internet users
Assessing capacity in WLAN-UMTS integrated networks
Hierarchical round-robin matching for virtual output queuing switches
Modelling and simulation of an avionics full duplex switched ethernet
A layered architecture for supporting optical burst switching
Performance evaluation of the V-BLAST system under correlated fading channels
Performance of turbo codes with SOVA algorithm in DSSS over channels with non-white additive gaussian noise
A comparison between two maintenance session protocols
Throughput comparison between RACH and CPCH in 3GPP
Convolutional turbo coded OFDM/TDD mobile communication system for high speed multimedia services
A flexible mobile communication infrastructure mechanism
Admission control for streaming services over HSDPA
A seamless handover between cdma2000 and WLAN for 3G-WLAN interworking service continuity
P-CPICH power and antenna tilt optimization in UMTS networks
Proposal of new EBG ground planes in the electric size reduction design of planar antennas
Assessing the impact of rainfall on system bandwidth for broadband fixed wireless applications
A new decision feedback equalizer using filtering diversity to mitigate error propagation
Anomaly detection for network servers using digital signature of network segment
Reconfigurable instruction interface architecture for private-key cryptography on the altera nios-II processor
Approximations to maximum weight matching scheduling algorithms of low complexity
Application of the saddle point method for the evaluation of the probability density function of pre-amplified OOK systems in the presence of intrachannel crosstalk
Cost-effective maximum lifetime routing protocol for wireless sensor networks
Implementation and evaluation of AntNet, a distributed shortest-path algorithm
Cost analysis of grooming ports for IP-over-WDM network protection
Priority-based congestion control in MPLS-based networks
Passive cluster based clock synchronization in sensor network
The realization of mobile number portability in Korea
The design and implementation of a shared packet buffer architecture for fixed and variable sized packets
A 10 Gbps GFP frame delineation circuit with single bit error correction on an FPGA
Managing pi-resources in 4G wireless systems : the opportunistic way
Searching for PI resources on MANETs using JXTA
A scheduling engine to allocate resources for multicast transmissions over a satellite link
Efficient resource management for the P2P Web caching
A cooperation model and routing protocol for QoS support in ad hoc networks connected to fixed IP networks
A two-phase algorithm for off-line inter-domain traffic optimization

Uplink blocking probability for a cell with WCDMA radio interface and differently loaded neighbouring cells

Introduction to multi-agent modified Q-learning routing for computer networks

On the use of traffic monitoring and measurements for improving networking

A DRM architecture to distribute and protect digital contents using digital licenses

A framework for service quality assurance using event correlation techniques

Performance analysis and service differentiation in the MAC SubLayer of IEEE 802.11e ad hoc networks

Web services based systems for network management and provisioning : a case study

Models for the supervision of Web services orchestration with dynamic changes

A distributed service discovery and selection framework in pervasive service environments

Links models in multi-service networks

A semantic lifecycle approach to learning object repositories

An ontology-based mechanism for assembling learning objects

Bridging the gap between learning management systems and learning object repositories : exploiting learning context information

Internet-based training in decoding algorithms and MAC protocols

eLearning in manufacturing processes : implementation by integrated Web services and streaming services

Educational materials for E-learning about signalling systems in telecommunication networks

Cooperative learning objects in an intelligent Web-based tutoring system

Teaching experiences with E-learning network infrastructures

Strategic planning and service models for the ELViRA project

Teaching educational management

Tele-pedagogy in the virtual educational communities

Distance tutoring of mechanics in a global framework
