Precognition : thinking about the query before it happens

Efficient method of combinatorial item set analysis based on zero-suppressed BDDs

Iterative mining translations from the Web

Extended link analysis for extracting spatial information hubs

An efficient technique for mining usage profiles using relational fuzzy subtractive clustering

A fast linkage detection scheme for multi-source information integration

Postal address detection from Web documents

Presentation retrieval method considering the scope of targets and outputs

Reliability and performance estimation for enriched WS-SAGAS

Query routing : finding ways in the maze of the deep Web

FRES-CAR : an adaptive cache replacement policy

A mapping scheme of XML documents into relational databases using schema-based path identifiers

XML document clustering using common XPath

An implementation of XML documents search system based on similarity in structure and semantics

Discovery of maximally frequent tag tree patterns with height-constrained variables from semistructured Web documents

Web community discovery using personal names

A comparative study of feature vector-based topic detection schemes for text streams

Collaborative filtering by mining association rules from user access sequences

Geocoding natural route descriptions using sidewalk network databases

An appropriate Boolean query reformulation interface for information retrieval based on adaptive generalization

Query disambiguation for cross-language information retrieval using Web directories

Analysis of topics and relevant documents for navigational retrieval on the Web

Mapping generation for XML data sources : a general framework

Mapping between data sources on the Web

Web : modern unmediated and semi-mediated search

Automatic metadata generation for Web pages using a text mining approach

News item extraction for text mining in Web newspapers

Automatic query refinement using mined semantic relations

Building a document class hierarchy for obtaining more proper bibliographies from Web

WordNet ontology based model for Web retrieval

Adaptive scoring method based on freshness for fresh information retrieval

Insights from viewing ranked retrieval as rank aggregation

A lightweight approach to semantic Web service synthesis

Web services composition : a security perspective
