Solutions innovation, solutions engineering for industry solutions

E-government and the CROWN project

Can agent systems deliver?

Evolution of the Intel's e-business data center toward a service-oriented infrastructure p. 2

Distributed policy specification and enforcement in service-oriented business systems p. 10

Enabling customer-driven processes in value-added networks using an architecture for E-collaboration p. 18

Designing a material analysis collaboratory for the process industry p. 25

Market agents with a sense for mechanisms p. 34

Enable efficient stage construction for replication based fault-tolerant execution of mobile agent p. 42

Exception handling in distributed workflow systems using mobile agents p. 48

UML models of agents in a multi-agent E-commerce system p. 56

Supporting Web user interface prototyping through information modeling and system architetecting p. 63

A model driven XML transformation framework for business performance management p. 71

Normal forms and normalized design method for business services p. 79

An agile method of modeling business process simulation for virtual enterprises p. 87

SCOUT contextually organizes user tasks p. 94

Modeling and reasoning about uncertainty in context-aware systems p. 102

A hybrid dialogue strategy for speech-enabled mobile commerce p. 110

Mobile RFID technology for improving M-commerce p. 118

E-government challenges in China p. 127

Credit &amp; risk management in banks today p. 128

Business intelligence - a case study in life insurance industry p. 129

An extended Petri net for modeling workflow with critical sections p. 134

Combination of RSS newsfeeds and forms for driving Web-based workflow p. 142

ARDE : a novel framework to define workflow participants p. 150

Research on workflow process structure verification p. 158

The sensitivity study on investment expenditures and ICF of the listed company in China IT industry p. 167

The nexus between information technology and competitive strategy : a conceptual framework and its hypotheses p. 171

Comprehensive evaluation of E-commerce Website based on concordance analysis p. 179

CRM systems used for targeting market : a case at Cisco system p. 183

Consistency analysis of interorganizational processes based on activity diagrams p. 187

Quantitative analysis of enterprise's logistics capability based on supply chain performance p. 191

A model and algorithm for out-sourcing planning p. 195

Towards a trust model with uncertainty for e-commerce systems p. 200

E-business software architecture based on temporal ECA rules and actions conflicts management p. 208
Ontology-based E-catalog matching for integration of GDSN and EPCglobal network

Research on modeling resources based on Web service technologies in manufacturing grid

A context-aware role-based access control model for Web services

Adding physical optimization to cost models in information mediators

Community cooperation in recommender systems

Context enabled multi-CBR based recommendation engine for E-commerce

Personalized E-commerce recommendations

Efficient content locating in peer-to-peer systems

Design and implementation of commerce data mining system based on rough set theory

An integrated rule-based and case-based reasoning system for customer service management

An efficient incremental algorithm for mining Web traversal patterns

Improving associative classification by incorporating novel interestingness measures

A hybrid approach for dynamic business process mining based on reconfigurable nets and event types

Model-driven business performance management

Measurement-based performance analysis of E-commerce applications with Web services components

Policy specification and matching for business performance management

Efficient content location based on interest-cluster in peer-to-peer system

Extraction of keyterms by simple text mining for business information retrieval

CRANAI: a new search model reinforced by combining a ranking algorithm with author inputs

A hierarchical nonparametric discriminant analysis approach for a content-based image retrieval system

Enhancing Web services availability

A model-driven approach to RFID application programming and infrastructure management

Supporting organizational E-learning

An administration model of DRBAC on the Web

Using resource and portfolio management solution to align IT investment with business

An efficient, low-cost inconsistency detection framework for data and service sharing in an Internet-scale system

A study of signaling game and its Bayesian equilibrium in CRM

Sweep based multiple ant colonies algorithm for capacitated vehicle routing problem

QoS measurement issues with DAML-QoS ontology

Integration of telematics for efficient management of carrier operations

Humancentric applications of precise location based services

Location aware messaging - integrating LBS middleware and converged services

A locating method for WLAN based location service
GridPML: a process modeling language and history capture system for grid service composition

S-club: an overlay based efficient service discovery mechanism in CROWN grid

A new micro-payment protocol based on P2P networks

A gateway replication scheme for improving the reliability of mobile-to-grid services

E-commerce success factors: exploratory and empirical research on the Chinese publishing industry

Business component identification of enterprise information system: a hierarchical clustering method

Reliable and efficient communication model of migrating instance to enable self-organization of dynamic alliance

Capacity allocation for business processes with QoS requirements: a heavy traffic approach

Optimizing path expression queries of XML data

Update of materialized WebView

Research of semantic caching for LDQ in mobile network

Frequency operators for condensative queries over data streams

Correctness verification of synchronization based workflow model

Adoption of mobile services in business: case study of mobile CRM

Semantic business process management: a vision towards using semantic Web services for business process management

HRIC: hybrid resource information service architecture based on GMA

A Petri net extended with stochastic priced transition

A Web-based PLM system research and implementation in a collaborative product development environment

Public RFID service platform based on ASP model

An intelligent event adaptation mechanism for business performance monitoring

Managing E-commerce catalogs in a DBMS with native XML support

A quantitative analysis of eCl@ss, UNSPSC, eOTD, and RNTD: content, coverage, and maintenance

Data partitioning over data streams based on change-aware sampling

Dempster-shafer evidence theory of information fusion based on info-evolutionary value for E-business with continuous improvement

A rumor-spreading model of service advertisement forwarding in decentralized E-commerce

FECT: a framework for automatic composition of Web services

Web-based application services composition for e-business

Web service composition using integer programming-based models

Web services automatic composition based on QoS

Combining QoS-based service selection with performance prediction

eDSR: a decentralized service registry for e-commerce

A lightweight mutual authentication protocol for RFID networks

Internet pricing with multiple demands for quality of service option

Stochastic inventory routing problem under B2C E-commerce
Prediction of the running time of tasks based on load
A system model and protocol for mobile payment
Deploying the digital aid framework: a non-traditionalist view of the intrinsic nature of E-business solutions for humanitarian relief
Supporting development and evolution of service-based processes
A novel approach for enacting the distributed business workflows using BPEL\script{4}WS on the multi-agent platform
Enterprise integration and monitoring solution using active shared space
A framework for service-oriented business integration under uncertainty
Quality driven Web services selection
A Web services provisioning optimization model in a Web services community
Business integration models in the context of Web services
Towards semantic service request of Web service composition
Venture firms value analysis: a control rights allocation model
Research on an intelligent on-line negotiation system
Mass customization model in cluster supply chain based on 2P&2BP
Who are the target customers in Chinese online game market?: segmentation with a two-step approach
Portals at BNP Paribas: a brief testimony
Refining production strategy optimization model based on mixed bi-level programming method
Using a component business model to facilitate business enterprise architecture and business services at the US Department of Defense
Study and applications of data mining to the structure risk analysis of customs declaration cargo
Proactive business performance management in the book distribution industry
