Developing content-intensive applications with XML documents, document transformations and software components
Towards development and use of in-house components framework: results and expectations
Towards a components grouping technique within a domain engineering process
Fine-grained contract negotiation for hierarchical software components
Modelling of input-parameter dependency for performance predictions of component-based embedded systems
Analyzing component-based systems using the self-organizing map
QoS-aware mobile middleware for video streaming
A framework to specify incremental software architecture transformations
Enhancing the management of a J2EE application server using a component-based architecture
QoSOnt: a QoS ontology for service-centric systems
A taxonomy of software component models
Component assessment metrics for CBSE
Software component certification: a survey
Surviving errors in component-based software
Patterns and component-oriented system development
The audition framework for testing Web services interoperability
Distribution of a hierarchical component in a non-connected environment
A hybrid component-based system development process
How agile COTS selection methods are (and can be)?
Visual assessment techniques for component-based framework evolution
Process patterns for software systems in-house integration and merge - experiences from industry
The impact of process workshop involvement on the use of an electronic process guide: a case study
The introduction and use of a tailored unified process: a case study
Case studies on analyzing software architectures for usability
Design failure cost as a measure of a process measurement system (a method for building the system and evaluating the measure)
Improvement of design specifications with inspection and testing
RUPSec: extending business modeling and requirements disciplines of RUP for developing secure systems
Software security analysis - execution phase audit
Multi-level configuration management with fine-grained logical units
From agile software development to agile businesses
Agile procurement: new acquisition approach to agile software development
Naked objects versus traditional mobile platform development: a comparative case study
Encouraging self-organization: reflections on a quality improvement workshop
An outline of CM[superscript 3]: emergency problem management
Improving the admissibility of flows with bounded arrivals and bounded delay requirements in rate-controlled packet networks
Using distributed admission control to support multimedia applications in MANET environments

Distributed P2P merging policy to decentralize the multicasting delivery

User behaviour analysis of a video-on-demand service with a wide variety of subjects and lengths

A hybrid spatial-temporal fine granular scalable coding for adaptive QoS Internet video

Traffic engineering from a fiber to service area access network

A model for user based traffic accounting

Network traffic analyzing and monitoring locations in the IP multimedia subsystem

The mobile telecommunications industry : the competition under the hypothesis of price discrimination strategy

Nested uniform resource identifiers

Voice over IP - considerations for a next generation architecture

RSerPool - providing highly available services using unreliable servers

ASQue : an agent communication language for ad-hoc wireless sensor networks

A tool for reliability and availability prediction

UML-based design of network processor applications

Component-based vs. model-based development : a comparison in the context of vehicular embedded systems

A tool integration platform for multi-disciplinary development

Model interchange using OMG standards

PRIMI - an open platform for the rapid and easy development of instant messaging infrastructures

Evolution of Web computing systems : experiences from Web-portal projects

Interest derivation through keywords

A toolbar for efficient interaction in online communities
