Towards the formal verification of a CO compiler: code generation and implementation correctness

Use of verification for testing and debugging of complex reactive systems

Experimental evaluation of FSM-based testing methods

Putting detectors in their place

Timed automata with data structures for distributed systems design and analysis

Operational semantics for real-time processes with action refinement

Specifying urgency in timed I/O automata

A cloverleaf of software engineering

Precise analysis of memory consumption using program logics

Using dominators to extract observable protocol contexts

Counting interface automata and their application in static analysis of actor models

Generating relational database transactions from recursive functions defined on $\text{EB}^3$ traces

Workflow enactment based on a chemical metaphor

Safe concurrency for aggregate objects with invariants

Invariants on demand

Omnibus verification policies: a flexible, configurable approach to assertion-based software verification

Proving correctness of JavaCard DL taclets using Bali

Object oriented verification kernels for secure Java applications

Customised induction rules for proving correctness of imperative programs

A case study of C source code verification: the Schorr-Waite algorithm

Formal verification of dead code elimination in Isabelle/HOL

Verification of an off-line checker for priority queues

Building verification condition generators by compositional extensions

Towards a truly concurrent model for processes sharing resources

A proposal for relative time Petri nets

From RT-LOTOS to time Petri nets: new foundations for a verification platform

Making formal methods work

On the theory of patching

Pragmatic consistency management in industrial requirements specifications

Automatic maintenance of association invariants

A framework for component-based construction

Control code obfuscation by abstract interpretation

Stuttering abstraction for model checking

Description logics for shape analysis

Formalising control in robust spoken dialogue systems

A unified description formalism for complex HCI-systems

Formal analysis of human-computer interaction using model-checking

Software refinement with perfect developer
BRILLANT: an open source and XML-based platform for rigorous software development  p. 373

Logical foundations of program assertions: what do practitioners want?  p. 393
On compatibility and behavioural substitutability of component protocols  p. 394
A strategy for the formal composition of frameworks  p. 404
Interface abstraction for compositional verification  p. 414
SHReQ: coordinating application level  p. 425
A synchronous process calculus for service costs  p. 435
