Cognitive dimensions of notations p. 3
Visual modeling for software intensive systems p. 4
Unified modeling language 2.0 p. 9
Implementing domain-specific modeling languages and generators p. 10
Immersive integration for virtual and human-centered environments p. 13
A stagecast retrospective p. 14
SysML with ARTiSAN studio p. 15
A suite of visual languages for statistical survey specification p. 19
HyperFlow: an integrated visual query and dataflow language for end-user information analysis p. 27
Goal-directed debugging of spreadsheets p. 37
Garbage in, garbage out? : an empirical look at oracle mistakes by end-user programmers p. 45

How well do professional developers test with code coverage visualizations? : an empirical study p. 53
Executable visual contracts p. 63
Formal integration of inheritance with typed attributed graph transformation for efficient VL definition and model manipulation p. 71
Benchmarking for graph transformation p. 79
Kedama : a GUI-based interactive massively parallel particle programming system p. 91
Spoken programs p. 99
Visual integration of UML 2.0 and block diagrams for flexible reconfiguration in Mechatronic UML p. 109
Transformation of UML state machines for direct execution p. 117
Animated simulation of integrated UML behavioral models based on graph transformation p. 125
Resource-based models of visual interaction : understanding errors p. 137
A toolkit for addressing HCI issues in visual language environments p. 145
Designing features for both genders in end-user programming environments p. 153
What you see is what you code : a radically dynamic algorithm visualization development model for novice learners p. 163
Show me! : guidelines for producing recorded demonstrations p. 171
Visual specifications of correct spreadsheets p. 189
Who, what, and how : a survey of informal and professional Web developers p. 199
Estimating the numbers of end users and end user programmers p. 207
Facilitators and inhibitors of end-user development by teachers in a school environment p. 215
Navigating software architectures with constant visual complexity p. 225
Using a molecular metaphor to facilitate comprehension of 3D object diagrams p. 233
Easing program comprehension by sharing navigation data p. 241
Formally specifying the syntax and semantics of a visual query language for the domain of high energy physics data analysis p. 251
Achieving flexibility in direct-manipulation programming environments by relaxing the edit-time grammar p. 259
A bit-level concurrent visual programming language (A-BITS) and a base computation model (APC) for its development

RGG+ : an enhancement to the reserved graph grammar formalism

A visually-specified code generator for simulink/stateflow

A visual language and environment for specifying design tool event handling

A trainable system for recognizing diagrammatic sketch languages

A formal approach to the generation of visual language environments supporting multiple views

An experimental study into the default reading of constraint diagrams

Application of jigsaw-puzzle-like 3D glyph to visualizing grammatical constraints

A new static depiction and input technique for 2D animation

EAVis : a visualization tool for evolutionary algorithms

Applying eye-movement tracking to program visualization

Visualizing what people are doing on the Web

A meta-design approach to end-user development

JOpera : an agile environment for Web service composition with visual unit testing and refactoring

Using objects of measurement to detect spreadsheet errors

The architecture of a comprehensive equation browser for the print impaired

The principle of pattern-oriented curriculum and its implementation in a computer science module for high school students

Template parsing with user feedback

Cultural differences and end-user computing

Forms of expression for designing visual languages for animation

Conceptual and technical scaffolds for end user development : using scenarios and wikis in community computing

Programming for artists : a visual language for expressive lighting design

Gestural musical improvisation and programming

Can we enhance performance via learning theory?

Adding flexibility to B2C booking systems using a virtual intermediate travel agent

Assisting end-users in understanding and programming simulations

CAM : a mobile paper-based information services architecture for remote rural areas in the developing world

Personal assistive device for adults with autism spectrum disorders

The design of an array visualization

Designing a programming terminology aid
