Silicon VLSI trends - what else besides scaling CMOS to its limit? p. 1
Overview of Cu/low-k technology failure analysis and reliability issues p. 5
Unique defects and analyses with copper damascene process for multilevel metallization p. 12
MEMS failure analysis and reliability p. 17
High reliability HV-CMOS transistors in standard CMOS technology p. 25
Reliability oriented process and device simulations of power VDMOS transistors in bipolar/CMOS/DMOS technology p. 29
Failures in copper interconnects: localization, analysis and degradation mechanisms p. 37
A new approach for faster IC analysis with PICA : STPC-3D p. 45
Conductive atomic force microscopy application on leaky contact analysis and characterization p. 54
Electromigration reliability of Cu interconnects and the impact of low-k dielectrics p. 59
130nm process technology integration of advanced Cu/CVD low-k dielectric material - case study of failure analysis and yield enhancement p. 63
Joule-heating-assisted electromigration failure mechanisms for dual damascene Cu/SiO$_2$/Si$_2$O$_3$ interconnects p. 69
Wafer level electromigration testing on via/line structure with a poly-heated method in comparison to standard package level tests p. 75
From microns to molecules - can FA remain viable through the next decade? p. 81
Application of memory tester for non-destructive detection of micro-crack and crack patterns in flash memory devices p. 82
Application of IR-OBIRCH to the failure analysis of CMOS integrated circuits p. 86
Study of oxide surface contamination using ToF-SIMS p. 92
Flip chip silicon fracture mechanism with 3-point bend metrology on flip chip ball grid array p. 97
Higher resolution acoustic images using frequency domain imaging p. 103
Studying of fracture joint failure mechanism on board level reliability test process comparing between SnPb and Sn Lead finished ICs p. 108
Reliability and failure analysis of SnAgCu solder interconnections on NiAu surface finish p. 113
Real case studies of fast wafer level reliability (FWLR) EM test as process reliability monitor methodology p. 117
A novel integrated scheme to improve the electrical and electromigration performance of Cu interconnects p. 123
Interface characterization methodology for nano-CMOS reliability-process and device reliability monitors p. 127
Gate dielectric breakdown induced microstructural damages in MOSFETs p. 134
Plasma charging damage immunities of rapid thermal nitrided oxides and decoupled plasma nitrided oxide p. 141
Electrical characterization of SiO$_x$N$_y$/Ta$_2$O$_5$/Ta stack gate oxides on strained-Si p. 146
Neutron induced oxide degradation in MOSFET structures p. 151
Progressive breakdown statistics in ultra-thin silicon dioxide p. 157
The effect of CHE and CHISEL programming operation on drain disturb in flash EEPROMs p. 164

Reliability of ultrathin JVD silicon nitride MNSFETs under high field stressing p. 168

Testing of low power CMOS circuits using optical emission from leakage current p. 173

Analysis of abnormal ESD failure mechanism in high-pin-count BGA packaged ICs due to stressing non-connected balls p. 174

ESD defect localization using photovoltaic laser stimulation techniques: optimization and interpretation p. 179

Vertical transistor deep trench DRAM failure analysis and failure mechanisms p. 183

Physical failure analysis techniques for Cu/low-k technology p. 187

Localization of electrical failures from the backside of the die: failure analysis case studies using infrared emission microscope p. 193

Identify optical proximity correction (OPC) issue in 0.13μm technology development p. 199

Application of energy-filtering TEM in contrast enhancement and elemental identification in IC failure analysis p. 202

STEM imaging applications in deep-sub-micron failure analysis and process characterization p. 206

Implementing thermal laser and photoelectric laser stimulation in a failure analysis laboratory p. 210

Junction leakage analysis using scanning capacitance microscopy p. 213
