Design and fabrication of field emission-based pressure microsensors

Triode emitters with a well structured cathode

The influence of adsorption desorption processes on the work function of the cathode made of carbon nanotubes

Field emission from teepee-shaped carbon nanotube bundles

Optimization of electron beam focusing for CNT-FEDs

Effect of Ti interlayer on the growth of carbon nanotubes on Si by microwave-heated CVD

Cathodoluminescent white phosphors optimization for lighting applications

Properties of single field emitters deduced by use of spherical fowler-nordheim theory

Ring-shaped images as a result of non-uniform field emission from capped carbon nanotubes

Seppen-Katamuki analysis of electron emission from chemical vapor deposited multiwall carbon nanotubes with and without laser irradiation

Field emission properties of selectively grown carbon nanotubes for electron emitters in microwave power amplifier

The effect of the high and low activation temperature on the conduction of thermionic oxide cathodes for CRT applications

Simulations of emission characteristics of a double-gate carbon nanotube field emitter

A prototype cylindrical fluorescent lamp based on carbon nanotube field emission

Self-organized laser-produced Si and Ni micro-tip field emitter arrays enhanced with carbon nanotubes

Carbon-based composite nanomaterials as cold cathode sources

Uniformity measurement of electron emission from carbon nanotubes using electron beam resist

Structural deformation of single-wall carbon nanotubes during field emission process

Field emission properties from double walled carbon nanotubes produced by a catalytic CVD

Field emission properties of screen printed double-walled carbon nanotubes synthesized by thermal CVD

Field emission under extreme conditions from carbon nanopearls in a foam-like arrangement

Fabrication and characterization of gated carbon nanoube emitters in a trench structure

Study on some parameters of affecting field emission characteristics of carbon nanotubes films

Simulations of electronic transport in single-wall and multi-wall carbon nanotubes

Electric field-induced alignment of carbon nanotubes grown by CVD

Stable and high emission current from carbon nanotube paste with spin on glass

Effect of conductive filaments on the electron emission properties in cathodes

Influence of image force potential on the shot noise properties of field emitters

Field emission properties of defect-removed single-walled carbon nanotubes
The growth aspects of nanocrystalline diamond films and their effects on electron field emissions p. 82

Physical considerations of operating and characteristics modeling of nanostructural field emission devices p. 84

Field emission from arrays of free-standing carbon nanotubes grown by ICP-CVD p. 86

Numerical analysis of carbon nanotube field emitter arrays with embedded electron beam focusing structure p. 88

The effects of process parameters on size, density, structure, and field emission properties of Pd-catalyzed carbon nanotubes synthesized by thermal chemical vapor deposition p. 90

Study of field emission microscopic images originated from coherent scattering of multiwalled carbon nanotubes p. 92

Study of the driving performances with different structures of field emission displays p. 94

Field emission of clean and oxidized Mo(110) microtips p. 96

Carbon nanotubes field emitter and back-gated structure p. 98

Fabrication and optimization of triode structure CNT-FED p. 100

Ultra-high electron emission efficiency from defect control polyimide p. 104

Calculations concerning the electron transit time for an ideal cylinder vacuum microelectronics diode p. 106

Field emission of nanostructured boron nitride thin films in the presence of residual gases p. 108

Field electron emission through and from two-dimensional electron gas p. 110

Field emitter arrays for a free electron laser application p. 112

Numerical study of the electrostatic field gradients present in various planar emitter field emission configurations relevant to experimental research p. 114

Electron emission properties of gated silicon field emitter arrays for charge neutralization device in ion implantation system p. 116

Experimental investigations of micro-fabricated folded-waveguide backward-wave oscillator (BWO) p. 118

Photonic crystal reflex klystron using field emission cathode p. 120

Characterization of nano-size YVO4:Eu and (Y,Gd)VO4:Eu phosphor via low voltage cathodoluminescence p. 122

Low temperature burnable CNT paste component for CNT-field emitter backlight unit p. 124

Electron field emission property of boron doping nano-crystalline diamond p. 126

Preparation and field emission properties of nano-structured CuO emitters p. 128

Influence of ion effects on field-emission-limited diodes p. 130

One of perspective directions of creation of highly effective field emission microdevices and microdisplays p. 132

Low temperature fabrication of poly-Si FEA for display application p. 134

Reduction of the work function on Mo(100) surface covered with ZrO2 p. 136

Smith-Purcell radiation using a single tip Si field emitter p. 138

Emission statistics for Si and HfC/Si emitter arrays after gas exposure p. 140

Secondary electron emission from wide-bandgap material-coated carbon nanotubes
Screen printed carbon nanotube field emitter array for lighting source application p. 142

Influence of gas atmosphere during laser surface treatment of CNT cathode p. 144

STM observations of hafnium carbide thin films as a field emission material p. 146

Investigation of a planar microtriode fabricated with direct write nanolithography using electron beam induced deposition p. 148

Scanning anode field emission microscopy studies of planar cathodes p. 150

Synthesis and field emission properties of ultra-high density vertical aligned silicon nanowires p. 152

Development of counter-streaming two beam oscillator based on cold cathode p. 154

Edge-shaped diamond field emission arrays p. 156

Nonlinear dielectric properties of Ba(Zr,Ti)O3 thin films for tunable microwave device applications p. 158

AlN coating and oxidation on silicon field emitters to enhance reliability for space applications p. 160

A novel light emitting device based on Si nanostructures and tunneling injection of carriers p. 162

Preparation of aligned Cu2S nanowire arrays and their field emission properties p. 164

Emission confinement of the (100) planes of etched tungsten field emitters coated with ZrC and NbC thin-film p. 166

Coaxial cold-cathode magnetron p. 168

Time-dependent models of field-assisted photoemission p. 172

Optical and electrical studies of a single spindt-type field emitter p. 174

Simulation of field enhancement effects in carbon nanotubes p. 176

Transport and field-emission properties of carbon nanotubes p. 178

New mechanism of cluster field evaporation in Rf breakdown p. 180

Calculations of enhanced field electron emission at the triple junction p. 182

Field emission based vacuum devices for the generation of THz waves p. 184

Field emission enhanced semiconductor thermoelectric cooler p. 186

Development of electron optical instrument for evaluation of multi emitters - real time observation of operating conditions of multi emitters by LEEM, PEEM and FEEM p. 188

A study of field emission from supramolecular carbon structures p. 190

Pressure dependence and current stability of field emission from carbon nanotubes on porous alumina p. 192

Influence of stress on the field emission properties of amorphous carbon thin films and multiwall carbon nanotube-polymer composites p. 194

Emission limited electrostatic atomization and the fine structure constant p. 196

Ion-beam morphological conditioning of carbon field emission cathode surfaces p. 198

Double-gated silicon field emission arrays : fabrication and characterization p. 200

Field emission and electrical properties of imogolite p. 202

High intensity pulse x-ray generation by using graphite-nanocrater cold cathode p. 204

Low voltage driven carbon nanotube field emission cathode p. 208

Selective growth of carbon nanotubes on silicon protrusions p. 210
High current field emission from carbon nanotube films grown using electroplated Ni catalyst

Fabrication of spindt-type field emission arrays with aligned carbon nanotube emitters

Novel flat MIS electron emitter

Robust and regenerable integrally gated carbon nanotube field emitter arrays

Fabrication and field emission characteristics of high density carbon nanotube microarrays

Synthesis and field emission properties of carbon nanosheets

A triode of FED with low driving voltage

FEA image sensor with electron beam focusing system

Comparison of noise and emission characteristics between individually operated Nb/Nb and Ir field emitter array cathodes and etched W(100) emitters

High current, high current density field emitter array cathodes

Field emission energy distributions from silicon field emitters

Usefulness of nanocrystalline silicon ballistic electron emitter for operation in either low vacuum or atmospheric pressure

Effect of material properties on low-energy electron transmission in thin CVD diamond films

Observation of electron emission pattern from nano-split emitter fabricated using beam assisted process

Field emission characteristics of BCN nanofilm

X-ray generation from large area carbon-based field emitters

Laser surface treatment of CNT cathodes for large diagonal FEDs

Emission characteristics of printed CNT cathodes after laser treatment

Optimization of electron field emission from carbon nanotubes paste

Effect of laser treatment on morphology and field emission from nanocarbon CVD films

In-situ post-treatment for field emission improvement of carbon nanofibers in inductively coupled plasma system

Effect of thermal annealing on emission characteristics of nano electron source fabricated using beam assisted process
