Comparing power factor and displacement power factor corrections based on IEEE Std. 18-2002  
Harmonic problems produced from the use of adjustable speed drives in industrial plants: case study  
Theory for the design of C-type filter  
Simplified reactance one-port compensator for ASD harmonic mitigation  
A model reference generating an optimal DC voltage for a three phase shunt active power filter  
The influence of process equipment composition on financial losses due to voltage sags  
Fuzzy logic inverter flux control of fuel cell plants in distributed generation  
Taking account of harmonic currents in the selection of busway systems  
Dynamic power filter & capacitor compensator for isolated self-excited induction generator driven by a wind turbine  
Optimum number and location of power quality monitors  
A novel control scheme for STATCOM using space vector modulation based hysteresis current controller  
Novel indices for power quality measurement  
A case study of flicker/interharmonic problems caused by a variable frequency drive  
Effect of time variation of system impedance and voltage harmonics on LC compensation for nonlinear loads  
Measured sagged voltages caused by identified power system faults  
A software based methodology for calculating powers in three phase networks  
Shunt tuned filter on the LV side of distribution systems: design and performance  
Overvoltage protection, faults and voltage sags  
Use of turbine inertia for power smoothing of wind turbines with a DFIG  
A new optimised SVPWM technique control for autonomous parallel active filter  
Microturbine harmonic impact study using ATP-EMTP  
ATP-EMTP study of potential adjustable speed rejection due to voltage sags  
The influence on harmonic propagation of the resistive shunt harmonic impedance location along a distribution feeder and the influence of distributed capacitors  
Seven-level shunt active power filter  
Study of voltage sag effects on three-phase transformers  
Study of harmonic cancellation between AC/DC converter currents  
Review of harmonic current extraction techniques for an active power filter  
Harmonic filtering and power factor improvement on illumination systems with metallic halide lamps - case study  
Design and implementation of a low-voltage medium power sag compensator  
Distribution reliability analysis program  
Analysis of power quality problems in low voltage circuits  
The effect of neutral path impedance on voltage and current distortion: Part II: symmetrical and balanced three-phase systems
The effect of neutral path impedance on voltage and current distortion : Part I : imbalanced three-phase systems
Automated comprehensive assessment and visualization of voltage sag performance
Analysis of voltage disturbances caused by simultaneous amplitude and phase modulation in electric power network
The use of power definitions and correlation in the identification of non-linear loads for the purposes of revenue
New concept of power quality improvement method in marine electric propulsion system

Implementation and comparison of power definitions using a DSP based prototyping system
The effect of harmonics on the optimal capacitor placement problem
Selecting revenue meters for harmonic producing loads
Unbalanced STATCOM analysis in the harmonic domain
Hilbert space techniques for reactive power compensation in polyphase systems with unequal line resistances
The effects of linear and non-linear operation modes in transformers
Introducing prob-a-sag - a probabilistic method for voltage sag management
A novel approach for spectral analysis of monitored power systems
On some spectrum estimation methods for analysis of non-stationary signals in power systems : Part II : numerical applications
On some spectrum estimation methods for analysis of non-stationary signals in power systems : Part I : theoretical aspects
Induction motor supply voltage variations for distribution system faults
Generation of harmonics and filtering in low voltage systems
What do and what should digital revenue meters measure on distorted networks?
A simple new control technique for unified power quality conditioner (UPQC)
Experimental measurements of energy consumption changes in a Wye distribution system serving multiple computer loads as various harmonic solutions are applied

A modified linear multiple-loops control scheme applied to a three-phase series active power filter for voltage harmonic cancellation and reactive power compensation

Frequency domain models of shunt active power filters for iterative harmonic analysis
Response analysis of an industrial mixer drive subjected to voltage sags : Part I : modeling and simulation results
Response analysis of an industrial mixer drive subjected to voltage sags : Part II : experimental design and results
Comparison of three series hybrid active power filter topologies
Advanced control of wind turbine-generators to improve power system dynamic performance
The influence of a phase change in the measured voltage on flickermeter response
Power measurement using the wavelet transform of analytic signals
Design of shunt-connected dynamic voltage restorers
Comparative analysis between indexes related to quantifying harmonic voltage distortions in university environment
Service continuity indices for the Brazilian main transmission network p. 356
Indirect current control techniques of three phase APF using fuzzy logic and proportional integral controller comparative analysis p. 362
Line harmonic currents in 12 pulse rectifiers with unbalanced supply voltages p. 368
A new instantaneous method for harmonics, positive and negative sequence detection for compensation of distorted currents with static converters using pulse width modulation p. 374
Evaluating the risk of equipment disruption related to voltage sags p. 379
Linearised frequency domain modelling of AC impedance imbalance in HVDC systems p. 385
Power quality of waveform generator based on the Csound software sound synthesizer p. 391
Proposal of a local dc distribution network with distributed energy resources p. 397
Application of neural networks to voltage fluctuations measurement - a proposal for a new flickermeter p. 403
A comparison between the electrical capabilities of the cables used in LV AC and DC power lines p. 408
Measurement placement for power system state estimation by decomposition techniques p. 414
Primary and secondary indices for power quality (PQ) survey reporting p. 419
Benchmarking utilities for the impact of voltage sags on customers p. 425
System impacts evaluation of a single-phase traction load on a 115 kV transmission system p. 430
Practical issues of three-phase, three-wire, voltage source inverter-based shunt active power filters p. 436
On four-conductors low voltage cables ampacity in balanced and unbalanced non sinusoidal conditions p. 442
Saturated core reactor static compensator : computational versus experimental performance analysis p. 450
Decision theory criteria for medium voltage component sizing in presence of non linear loads p. 456
Analysis of interharmonics generated by a ship propulsion system p. 465
Modelling and sensitivity analysis of the thermal behaviour of LV-cables for different current conditions p. 471
Modeling waveform distortion produced by DC locomotive conversion system : Part 1 : locomotive model p. 477
Modeling waveform distortion produced by DC locomotive conversion system : Part 2 : Italian railway system model p. 483
IEC flickermeter response to interharmonic pollution p. 489
Evaluation of harmonics and interharmonics produced by AC/DC/AC conversion systems p. 495
On the effects of voltage subharmonics on power transformers : a preliminary study p. 501
A smart measurement system for reconstructing voltage RMS value over long time interval p. 507
A PLL less var generator based on one-cycle control p. 512
Comparison of power definitions for reactive power compensation in nonsinusoidal conditions p. 519
A new robust phase tracking system for asymmetrical and distorted three phase networks p. 525

Uses of signal derivatives in analysis of voltage sags p. 531
A comparison between fixed-frequency sliding-mode and resonant current controllers for shunt active filters p. 537
Control of a multi-module parallelable three-phase active power filters p. 543
A proposal for UIE/IEC flicker measurement using digital filters : equipment prototype and validation p. 549
Solving the ill-conditioned polynomial for the optimal PWM p. 555
Mini-DVR - dynamic voltage restorer with active harmonic filter (tests of prototype) p. 559

Modeling the reliability of distribution power systems using Petri nets p. 567
Nonactive current definition and compensation implementation using a shunt active filter p. 573
Source current harmonic analysis of adjustable speed drives under input voltage unbalance and sag conditions p. 579
A software for voltage sags strategic studies p. 588
A harmonic screening tool for capacitor applications in transmission systems p. 594
PF-compensated low-distortion AC/DC front-end p. 600
Power quality in distributed generation system based on fuel cell technology - a case study p. 608
Three-phase electromagnetic filter for zero sequence harmonic p. 613
Influence of DC ripple and commutation on the probabilistic harmonic models of multiple AC/DC converters p. 619
Transformer controlled switching - strategy validation p. 625
The optimal selection of mitigation methods against voltage dips and interruptions : a customer based approach p. 631
The role of a synchronous distributed generator on voltage sags p. 637
A distribution network analyzer for power quality studies p. 642
VAr compensation and elimination of harmonics in three-phase four-wire system based on resistance emulation technique p. 647
Harmonic torques in three-phase induction motors supplied by non-sinusoidal voltages p. 652
Power system time variance - LPTV model implementation and identification problems p. 658

Calculation of voltage dips in meshed grids p. 666
A strategy for voltage regulation in Aeolian systems p. 672
Improved motor starting capability of three phase UPS inverters p. 678
Determination of the optimum measuring positions for power quality monitoring p. 684
A novel power quality assessment method using real time hardware-in-the-loop simulation p. 690
Assessing the accuracy of power quality instrumentation p. 696
One cycle AC RMS calculations for power quality monitoring under frequency deviation p. 700

Re-evaluating electric power system harmonic distortion limits for shipboard systems p. 706
Mathematical modeling of voltage dip transients in LV networks p. 712
Using macromodels to evaluate a process control system's response to voltage sags p. 717
EKF- and wavelet-based algorithms applied to harmonic detection for active shunt filters p. 721
A new performance factor for weighted harmonic distortion evaluation p. 728
A Matlab-simulink flickermeter model for power quality studies p. 734
Harmonic passive filter planning in radial distribution systems using microgenetic algorithms p. 739
