Independent component analysis, sparse component analysis and non-negative matrix factorization

Nonlinear image processing using Teager filters

Tutorials : advanced image processing for practical application

Robust image search algorithms : fundamentals and industrial applications

A practical guide to nonlinear signal and image processing by using wavelet

Sinusoidal time delay tracking by a self-tuned LMS filter with interpolation based on system response coefficient ratios

Ultrasonic sonar clicks emitted by Mediterranean bottlenose dolphins - analysis and modeling

Chaos based semi blind identification of nonlinear systems

A AM/FM single component signal reconstruction using a nonsequential time segmentation and polynomial modeling

Chaoticity analysis and control of pricing time series in multi-agent artificial demand-supply markets modeled by the genetic programming

Generation of high resolution images from low resolution images

Resolution enhancement of digital images with data-dependent biasing

Improvement of the image enlargement method based on the Laplacian pyramid representation

Anisotropic diffusion for image filtering based on MDL and morphology

An improved correlation-based watermarking method for images using a nonlinear programming algorithm

GA-based adaptive image watermarking with JND profile and fuzzy inference system

Blind grayscale logo watermarking based on image fusion principles

Colored digital watermarking technology based on visual cryptography

Application of Fourier spectrum for describing 'formal' of cloths

Estimation of babies' emotion by frequency analyses of their cries

Nonlinear image processing for beautifying facial images

A design method of criteria for detecting the number of superimposed signals

An efficient alternating optimization algorithm for detecting the number of coherent signals

Error analysis of entropy estimator for a memory-less information source

Non-linear fusion of images and the detection of point sources

Polynomial hybrid filtering

Analysis of polynomial weighted median filters

Spectral design of polynomial weighted median filters

Two-stage methods for mixed noise removal

Exact discrete-time representation of continuous-time volterra filters

Interpolated distanced bigram language models for robust word clustering

A parallel hardware design for snake models with an FPGA architecture

A novel DCT architecture for quality and power efficient

Transmission-line filter synthesis using genetic algorithms

A design for improving linearity of transconductor by canceling effect of mobility degradation from vertical field
Subjective and objective quality assessment of noise reduced speech signals
A robust algorithm for surface corner matching based on homograph
Arbitrary view image generation using a single camera based on rectangular parallelepiped approximation and known environment information
Tracking of body status using extended Kalman filter
A study on footstep detection for personal recognition
Combination of simple adaptive control method and neural networks for MIMO nonlinear magnetic levitation system
Multi-layer neural network for precursor signal detection in electromagnetic wave observation applied to great earthquake prediction
Fuzzy regression by asymmetric support vector machines
A novel intelligence request dispatcher algorithm for Web server clusters
Intelligent traffic junction signal controller design for a junction group
Transform-based layered query system for image indexing and retrieval
An effective video matching algorithm for adaptive video fingerprints
A wavelet-based compression method with fast quality controlling capability for long sequence of capsule endoscopy images
The target tracking using the spatial-temporal probability model
Multi-target car license plate detection from complex environment
Adaptive nonlinear predictive analysis for speech using a cascaded LMS-VSLMS predictor
Waveform reconstruction from non-uniform samples with application to speech coding

Environmental warping for in-car speech recognition
Noise robust Chinese speech recognition system for isolate words
A vowels recognition model for Laotian language using transfer function on bark scale and hidden Markov modeling
Acoustic space analysis method utilizing statistical multidimensional scaling technique
Estimating embedding parameters using structural learning of neural network
Analysis of a nonlinear system via internal-state of a neural network
Incremental learning using self-organizing neural grove
A multidimensional associative memory neural network to recall nearest pattern from input
Unsupervised neural network to nonlinear blind separation
Joint diagonalization learning algorithm for nonlinear blind source separation
A spatiotemporal approach for passive sound source localization - real-world experiments
Nonlinear wavelet denoising for improved bearing estimation in ocean under non-Gaussian noise conditions
Development of a database of PARCOR coefficients for adaptive DOA estimation
A multichannel weighted median filter for complex array signal processing
'Specmurt analysis' of multi-pitch signals
Mixed-phase modeling of snore sounds within a nonlinear framework for component identification
