Contact contamination and arc interactions
Arc discharge and contact reliability in switching and commutating contacts
Contact erosion of Ag/SnO$_2$/In$_2$O$_3$ made by internal oxidation and powder metallurgy
Occurrence of SiO$_2$ on the contact surface and its dependence of electrode in silicon vapor
The effect of silver composition and additives on switching characteristics of silver tin oxide type contacts for automotive inductive loads
Substitution of silver/cadmium oxide in high voltage disconnectors
High temperature resistant galvanic deposited gold layers for switching contacts
Asynchronous modular contactor with intelligent motor control applications
Modeling and management of microshocks under high voltage transmission lines
Effect of short circuit current duration on the welding of closed contacts in vacuum

Intermittency events in bio-compatible electrical contact
The influence of contact interface characteristics on vibration-induced fretting degradation
Displacement measurements at the connector contact interface employing a novel thick film sensor
Vibration-induced deterioration of tin-coated connectors studied by using a force controlled fretting bench-test
Lubrication of electrical contacts
Inspection of the contaminants at failed connector contacts
On the spontaneous growth of soft metallic whiskers
The "selective" deposition of particles on electric contact and their effects on contact failure
Cathode spot behavior on tungsten-copper contacts in vacuum and the effect on erosion

Time-coordinated non-arcing breaking operation of reed switches for higher current
The influence of load and contact material on the tangential separation force of low current switching contacts
An investigation for the method of lifetime prediction of Ag-Ni contacts for electromagnetic contactor
The evolution of arc fault circuit interrupters
Performance classification for electrical connections using ASTM B868
Conditions for series arcing phenomena in PVC wiring
Rating power connectors using voltage drop
Micro motion at the failed contact interfaces
Effect of fretting slip amplitude on the friction behavior of electrical contact materials
The fretting characteristics of intrinsically conducting polymer contacts
Application of the finite-element analysis for the calculation of an insulation displacement process
Deflection analysis of spring connector
A model for lifetime evaluation of closed electrical contacts
A mechanical, electrical, thermal coupled-field simulation of a sphere-plane electrical contact

Pore corrosion model for gold-plated copper-contacts

Electrochemical migration of land grid array sockets under highly accelerated stress conditions

Multi-scale study of the electrical properties of organic layers grafted on gold surfaces

The effects of surface contamination on resistance degradation of hot-switched low-force MEMS electrical contacts

Micro phenomena in low contact-force probing on aluminum

Finite element analysis of magnetic structure for micro-electro-mechanical relays

Contact resistance characteristics of high temperature superconducting bulk - part IV

Synthesis and characterization of Ti-Si-C ternary compounds for electrical contact applications

Equivalent constriction resistance measured with the low DC voltage method under the influence of fritting phenomena

Multi-spot model showing the effects of nano-spot sizes

Development of the lead-free brush material for the high-load starter

Long-term high resolution wear studies of high current density electrical brushes

Degradation process of a sliding system with Au-plated slip-ring and AgPd brush for power supply

Characteristics of carbon flat commutator for high-inductance DC motor driving automotive fuel pump

Influence of surface roughness on contact voltage drop of sliding contacts

An arc study at high DC current level in automotive applications

Consecutive observations of the relationship between eroded contact surfaces and motion of breaking arc at each breaking operation

A novel concept utilizing conductive polymers on power connectors during hot swapping in live modular electronic systems

The evolution of contact erosion during an opening operation at 42 V

Counter-measures for relay failure due to dynamic welding: a robust engineering design

Contact heating by long arcing during connector disconnection
