CMOS challenges of keeping up with Moore's law

Novel fabrication process to realize ultra-thin (EOT = 0.7nm) and ultra-low-leakage SiON gate dielectrics

Synthesis and control of ultra thin gate oxides for 90 and 65nm nodes

Suppression of thermal interface degradation in high-k film/Si by helium

Plasma doping and subsequent rapid thermal processing for ultra shallow junction formation

Advanced thermal processing of semiconductor materials in the msec-range

Advanced activation and stability of ultra-shadow junctions using flash-assisted RTP

Ultra shallow junctions formed by laser annealing

Near-ideal implanted shallow-junction diode formation by excimer laser annealing

Green laser annealing with light absorber

Pyrometry for laser annealing

Long pulse laser thermal processing: annealing duration trade-off for next generation semiconductors hot processes

Methods and systems for laser annealing of doped semiconductors involving ultra-shallow junctions

Non-contact characterization of several silicon oxides and oxynitrides grown by rapid thermal processing

Manufacturability comparison of thin oxynitride films

SiON gate dielectric formation by rapid thermal oxidation of nitrided Si

Enabling single-wafer low temperature radical oxidation

Importance of heat-up ramp rate for palladium-silicide fully-silicided-gate structure formation

Multi-scale simulation of ultra-fast radiation anneal process for robust process implementation

Combination of plasma doping and flash anneal RTP for 45nm CMOS mode

High productivity single wafer radical oxidation system

Improvement in Cov and Vt roll-off of 65nm source/drain extension engineering

Low temperature copper de-oxidation

The determination of annealing program for NiSi formation

Ultra low temperature NiSi processing

Ni[subscript 2]Si and NiSi formation by low temperature soak and spike RTPs

Advanced process control in RTP using the "relatively power"

Calibration of low temperature cable-less lightpipe pyrometer on the NIST post-exposure bake test bed

Multiple reflection effects during the in-situ calibration of an emissivity independent radiation thermometer

Infrared emittance measurement at NIST

Physical aspects of particle deposition in RTP

Optimization in vacuum photothermal processing (VPP)

Process influences on the microstructural and electrical properties of rapid thermal chemical vapor deposited polysilicon
Temperature non-uniformity from combined conduction and radiation heat transfer within a doped wafer p. 239

Temperature and doping dependence of the radiative properties of silicon: drude model revisited p. 251

Modeling the radiative properties of microscale random roughness surfaces p. 261

RAD-PRO: effective software for modeling radiative properties in rapid thermal processing p. 275

The accurate modeling of the temperature response of semiconductor substrates and thin films during RTA p. 283
