Computational intelligence for high-precision industrial robots  p. 1
The 3[superscript rd] generation of robotics : ubiquitous robot  p. 2
Robot navigation using biosonar for natural landmark tracking  p. 3
Design of a semiautonomous biomimetic underwater vehicle for environmental monitoring  p. 9
The null-space-based behavioral control for mobile robots  p. 15
Experimental comparison of a directed and a non-directed potential field approach to formation navigation  p. 21
Kinematic and dynamic adaptive control of a nonholonomic mobile robot using a RNN  p. 27
A study of a single robot interacting with groups of children in a rotation game scenario  p. 35
Designing and observing human-robot interactions for the study of social development and its disorders  p. 41
Speech-based localization of multiple persons for an interface robot  p. 47
Is someone watching me? - consideration of social facilitation effects in human-robot interaction experiments  p. 53
An approach for programming robots by demonstration : generalization across different initial configurations of manipulated objects (not part of special session)  p. 61
MiReLa : a musical robot  p. 67
Trajectory reconstruction with NURBS curves for robot programming by demonstration  p. 73
Task skill transfer of bolt attachment task  p. 79
Towards an autonomous small-size humanoid robot : design issues and control strategies  p. 87
Pinching at finger tips by humanoid robot hand  p. 93
Realtime estimation of human hand posture for robot hand control  p. 99
Forces analysis for micro-manipulation  p. 105
Design and shape deposition manufacturing (SDM) fabrication of a PZT-actuated tool for micromanipulation  p. 111
Overview of microgrippers and micromanipulation station based on a MMOC microgripper  p. 117
Automatic dextrous handling of micro components using a 6 DOF microgripper  p. 125
Tele-manipulation by adhesion of micro objects  p. 133
Prediction of diffuse large B-cell lymphoma outcome based on genes' analysis by use of SOM  p. 139
An architecture for sentient GPRS-enabled MicroBots  p. 145
Uncalibrated visual-servoing of a dual-arm robot for surgical tasks  p. 151
Sensory operation of robot manipulator by using brain-wave signals  p. 157
High frequency translational oscillation & rotational drilling of the needle in reducing target movement  p. 163
The kinematic Hessian and higher derivatives  p. 169
Wavelet-based disturbance classification with robot arm application example  p. 175
Robust tracking control of space robots using fuzzy neural network  p. 181
An adaptive neural controller and direct adaptive controllers for robot manipulators in the joint space p. 187

Contact task by space teleoperation using force reflection of communication time delay p. 193

An approach for generating high velocity and high acceleration trajectories of industrial robots p. 199

A simple algorithm of pitch detection by using fast direct transform p. 205

Development of a robot with a sense of self p. 211

Two-dimensional weighted PCA algorithm for face recognition p. 219

Sensing planning to optimize work object location measurements in intelligent robotics p. 225

Evolutionary acquisition of complex behaviors through intelligent composite motion control p. 231

Application of single neuron model to motion planning and control of under-actuated robot by MDP frame work p. 237

Autonomous transition of transportation network by interactions between agents and an environment p. 243

Path planning of automatic optical inspection machines for PCB assembly systems p. 249

Great selection pressure genetic algorithm with adaptive operators for adjusting the weights of neural controller p. 255

Creating swing-up patterns of an acrobot using evolutionary computation p. 261

Integrating computer vision libraries in networked robotic systems p. 267

Automatic building detection from aerial images for mobile robot mapping p. 273

Mobile camera parameter recovery in an unknown environment without point features p. 279

A genetic algorithm application to stereo calibration p. 285

Image-based adaptive visual servoing of 2D robots under Jacobian and dynamic friction uncertainties : theory and experiments p. 291

Low-cost positioning system for agricultural vehicles p. 297

Is structure needed for omnidirectional visual homing? p. 303

Robot self-localization using visual attention p. 309

Laser based personal navigation system p. 315

Genetic algorithm for a fuzzy spiking neural network of a mobile robot p. 321

PR-SLAM in particle filter framework p. 327

Low level navigation system for a POMDP based on WiFi and ultrasound observations p. 335

On the tips of one's toes : self-localization in a dynamic environment p. 341

A vision based algorithm for active robot localization p. 347

Navigation of an outdoor service robot by matching 2D laser scans p. 353

Tuning of discrete-time PID controllers in sensor network based control systems p. 359

Legs that can walk : embodiment-based modular reinforcement learning applied p. 365

Advanced solution for a benchmark robot control problem p. 373

Ball balancing system : an educational device for demonstrating optimal control p. 379

Effect of measurement noise on a gradient based repetitive control algorithm p. 385

Learning by observation of robotic tasks using on-line PCA-based Eigen behavior p. 391
A Petri net modelling of an adaptive learning control applied to an electric wheelchair p. 397

Modular neural control for a reactive behavior of walking machines p. 403
A wearable inertial sensor system for human motion analysis p. 409
An adaptive task assignment method for multiple mobile robots via swarm intelligence approach p. 415
Expression of emotion in robots using a flow of artificial consciousness p. 421
Data-based modeling and control of a biped robot p. 427
Intelligent communication between agents of autonomous decentralized FMS p. 433
Cooperative systems modeling, example of a cooperative e-maintenance system p. 439
Cooperative reinforcement learning : exploring communication and cooperation problems p. 445
Development of service robot for fetching objects in home environment p. 451
RT-component object model in RT-middleware - distributed component middleware for RT (Robot technology) p. 457
CoRoBA, an open framework for multi-sensor robotic system integration p. 463
Reactive and deliberative control and cooperation in multi-agent system based process automation p. 469
Ambient intelligence as paradigm of a full automation process at home in a real application p. 475
Time sequence data mining for cooking support robot p. 481
Using Horocol to program a society of agents or teams of robots p. 487
Experiments and examination of mirror image cognition using a small robot p. 493
Nonverbal interface for user-friendly manipulation based on natural motion p. 499
Model-free execution monitoring by learning from simulation p. 505
Mapping the surface of an unevenly moving steel billet p. 513
Application of multivariate process control on particle size analyzer p. 519
Fund raising systems using robots (architecture and behavior study) p. 525
State observer-based discrete-time fuzzy control system p. 531
Robotic airship mission path tracking control based on human operator's skill p. 537
Evolutionary fuzzy system for architecture control in a constructive neural network p. 541
Mobile robot control based on fuzzy behavior and robot safety body in unknown environment p. 547
Intelligent autonomous navigation for mobile robots : spatial concept acquisition and object discrimination p. 553
Exploring the world through grasping : a developmental approach p. 559
The "what" problem : the emergence of new goals in a robot p. 567
Faster learning in embodied systems through characteristic attitudes p. 573
Using sensory-motor phase-plots to characterise robot-environment interactions p. 581
Sensor adaptation and development in robots by entropy maximization of sensory data p. 587
Development of representations, categories and concepts - a hypothesis p. 593
Adaptive organization of generalized behavioral concepts for autonomous robots : schema-based modular reinforcement learning p. 601
Polyhedral convex cones for computing feasible grasping regions from vision p. 607
New objects seizure method in mobile robotic using a visual servoing and neural network classification p. 615
Self-tuning sliding mode control with smooth control input p. 621
A sliding mode PID-controller design for robot manipulators p. 625
A new rotation invariant similarity measure for trajectories p. 631
Implementation of the "embedded object" concept and an example of using it with UML p. 635
A collective moving algorithm in modular robotics : contribution of communication capacities p. 641
Remote tools using wireless communication for self-reconfigurable robot, applied to msam project p. 647
Distributed real time architecture for small biped robot YABIRO p. 653
A study on active balancing for rotating machinery using influence coefficient method p. 659
Multiactor approach and hexapod robot learning p. 665
Linear synchronous motor servo drive based on adaptive wavelet neural network p. 673
Comparison of three change detection algorithms for an electronics manufacturing process p. 679
Longitudinal vehicle guidance using neural networks p. 685
Task-oriented quality measures for dextrous grasping p. 689
Fabrication of diamond tip cantilever and its application to tribo-nanolithography p. 695
Multi-purpose impedance-based measurement system to automate microinjection of adherent cells p. 701
Comparison between micro-objects manipulations in dry and liquid mediums p. 707
Multi-robot concurrent learning of fuzzy roles for cooperation p. 713
Path planning protocol for collaborative multi-robot systems p. 721
Studies about the atomic capabilities concept for linear control systems in physical multi-agent environments p. 727
An occlusion prediction algorithm for visual servoing tasks in a multi-arm robotic cell p. 733
Programmable self-assembly p. 739
