Welcome to SIIT 2005!  
Factors influencing the lifetime of telecommunication and information technology standards: results of an explorative analysis of the PERINORM database  
Trends in ICT standards in European standardisation bodies and standards consortia  
Flexible standards  
Embedded capability relations to aid the industrial usability of telecommunications standards  
Alliance formation in standard setting  
Scale of standards dynamics in JTC1  
An analytic model for the prospective exploration of emerging infrastructures  
Elements influencing standardization in developing countries: a case of wireless security standard disputes  
+ vs. - impacts and dynamics of competing standards of recordable DVD-media  
Standards and interoperability in e-Government initiatives  
Web service security - vulnerabilities and threats within the context of WS-security  
Mobile communications and standards dynamics  
Installation of an IEEE 802.11 WLAN in a large university setting  
The mathematical basis of standards  
Evaluating the performance of standard setting organizations with patent data  
A prototype to analyze and support standardization decisions  
Standards of quality and quality of standards for telecommunications and information technologies  
Open standards and the problem with submarine patents  
Testing industrial VoIP implementations: registration for SIP phones  
A STEP towards the adoption of data-exchange standards: a UK defence community case study  
On the effects of IS company standards on business process performance  
US and EU regulatory competition in ICT standardization law & policy
