Technologies in Electronic Manufacturing and Packaging: Increased Productivity and Quality

Introduction

Interaction Between Wire and Ingot in Wiresaw Slicing

An Integrated Model for Electromagnetic Field and Heat Transfer in a Cylindrical Silicon Tube Growth System

High Resolution Wafer Surface Topology Measurement Using Phase-Shifting Shadow Moire Technique

Computational Model for Free Abrasive Machining of Brittle Silicon Using a Wiresaw

Advanced Electronics Manufacturing, Packaging, and Process Technologies

Introduction

Reliability Analysis of Flip Chip on Board Assemblies Using No-Flow Underfill Materials

Acoustic Emission Analysis for Fatigue Prediction of Lap Solder Joints in Mode Two Shear

Process Characterization and the Effect of Process Defects on Flip Chip Reliability

Fundamental Analyses of Smart Tooling for Assembly of Thin Flexible Circuit and Board Systems

Electronics Manufacturing

Introduction

Design and Manufacturing Issues

A Performance and Manufacturability Evaluation of Bump Chip Carrier Packages

Artwork Scaling Factor for Inner Layers in Multi-Layer Board Manufacture

A Study of the Aperture Filling Process in Solder Paste Stencil Printing

Design and Implementation of a Flexible Intelligent Electronics Remanufacturing System

Thermal Management and Transport in Manufacturing

Impact of On-Die Discrete Heating on Thermal Performance Characteristics of Silicon Based IC Electronic Packages

Performance of Thermal Enhancements in Chip on Flex

Integrated Transient Thermal and Mechanical Analysis of Molded PPGA Packages During Thermal Shock

Thermal Issues That Arise Due to Manufacturing Processes: Evaluation and Measurement Techniques

Structural Mechanics and Materials Issues in Manufacturing

A Model of Crack Nucleation in Layered Electronic Assemblies Under Thermal Cycling

Constitutive and Cyclic Damage Model of 63Sn-37Pb Solder

A Dual-Phase-Lag Diffusion Model for Predicting Thin Film Growth

Effect of Volume on Ceramic Ball-Grid Array Solder Life

In-Situ Warpage Measurement During Thermal Cycling of Dielectric Coated SS Substrate for Large Area MCM-D Packaging
