Adaptive vibration control of flexible plate structures with actuator placement optimization p. 1
Nonlinear actuation properties of macro fiber composite actuators p. 11
Integrated optimization of ACLD treatment for shape control of flexible beams using multi-objective genetic algorithm p. 19
Optimal design and control of a rotating flexible arm with ACLD treatment p. 27
The effective electromechanical moduli of domain engineered ferroelectric crystals p. 35
Biomimetic compliant system for smart actuator-driven aquatic propulsion: preliminary results p. 43
Maximum energy-efficiency compliant mechanism design for piezoelectric stack actuators p. 53
Application of SISO and MIMO modal analysis techniques on a membrane mirror satellite p. 63
Synthesis of shape morphing compliant mechanisms using load path representation p. 71
Layerwise analysis of thermal shape control in graded piezoelectric beams p. 79
A novel motion amplifier using an axially driven buckling beam p. 89
Micro-structronics and control of hybrid electrostrictive/piezoelectric thin shells p. 101
Harmonic wave propagation of ultrasonic arc stators p. 111
Control of static shape, dynamic oscillation, and thermally induced vibration of nozzles p. 119
Shape and displacement control of beams with various boundary conditions via photostrictive optical actuators p. 129
Compliant mechanical amplifier design using multiple optimally placed actuators p. 139
Design of a conformable rotor airfoil using distributed piezoelectric actuation p. 147
Genetic algorithm for the reconstruction of Bragg grating sensor strain distribution p. 161
The design tradeoffs of linear functionally graded piezoceramic actuators p. 171
A domain evolution model for the ferroelastic hysteresis of piezoceramic materials p. 181
Combined multi-scale sensing and neural network data fusion for damage identification p. 189
Behavior of magneto-rheological fluids subject to impact and shock loading p. 199
Behavior of ionic polymer-metal composites under subzero temperature conditions p. 205
Thermomechanical characterization of SMA actuators under cyclic loading p. 211
Design of constrained layer damping topologies p. 219
"Reversible macromolecules" as scaffolds for adaptive structures p. 229
Manufacturing and active control testing of active composite panels with embedded piezoelectric sensors and actuators: wires out by cut-holes and embedding p. 237
Architectures for integration of cellular microscale actuator arrays p. 245
Tuning the static and modal response of microcantilevers through lumped-parameter model-based design p. 255
Nondimensional damping analysis of flow-mode magnetorheological and electrorheological dampers p. 265
Quasi-static transduction characterization of galfenol p. 273
Optimal placement of PZT transducers for passive vibration control of planar composite structures p. 281

Application of frequency domain ARX models and extreme value statistics to impedance-based damage detection p. 289

Damage identification using impedance methods coupled with statistical classifiers p. 299

Optimization of electrical output in response to mechanical input in piezoceramic laminated shells p. 309

Dynamic response in the low-KHZ range and delta-E effect in ferromagnetic shape memory Ni-Mn-Ga p. 317

Application of a computational micro-electro-mechanical model for the prediction of self-heating of ferroelectric ceramic materials p. 325

Design and development of passive and active force feedback systems using magnetorheological fluids p. 333

Magnetoelectric effect in magnetostrictive/polymer and piezoelectric composites p. 341

Model of piezoelectric power harvesting beam p. 345

The compliant A-arm suspension p. 355

Nondimensional analysis of electrorheological and magnetorheological dampers using a Herschel-Bulkley constitutive model p. 367

Mitigation of biodynamic response to vibratory and blast-induced shock loads using magnetorheological seat suspensions p. 377

Magnetorheological hydraulic actuator driven by a piezopump p. 389

High authority morphing structures p. 399

A multi-functional stiffness/energy sensor for health monitoring of structures p. 405

Ionic liquids as hyper-stable solvents for ionic polymer transducers p. 415

Embedded ultrasonics with piezoelectric water active sensors for structural health monitoring of thin-wall structures p. 425

Investigation of performance of active microcapsule actuation p. 435

Electroactive polymers based on novel ionomers p. 445

Large electrostatic deformation of dielectric elastomer annulus p. 453

Piezoelectric energy harvesting using a clamped circular plate: experimental study p. 461

Comparison of the experimental behavior of a shape memory alloy in compression and tension p. 471

High authority piezoelectric actuation system synthesis through mechanical resonance and electrical tailoring p. 479

Influence of Martensitic transformation on the durability of TBC systems p. 489

Processing-microstructure-strength predictions for short fiber reinforced composite structures based on a spray deposition process p. 497

On the strength of Kagome structure for multifunctional materials p. 501

Application of continuum damage healing mechanics to self-healing composites p. 515

A computational study of interfacial stress distribution in unidirectional composites and its use in prediction of brittle failure p. 521

Triaxial failure of aluminium foams p. 529
